Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education which spans the human life from birth to age 8 Infants and toddlers experience life more holistically than any other age group Social emotional cognitive language and physical lessons are not learned separately by very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child's first sense of self or the building of a first identity Because this is a crucial part of children's makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience Mathematics in Early Childhood Oliver Thiel, Elena Severina, Bob Perry, 2020-11-05 Structured around Bishop's six fundamental mathematical activities this book brings together examples of mathematics education from a range of countries to help readers broaden their view on maths and its interrelationship to other aspects of life Considering different educational traditions and diverse contexts and illustrating theory through the use of real life vignettes throughout this book encourages readers to review reflect on and critique their own practice when conducting activities on explaining counting measuring locating designing and playing Aimed at early childhood educators and practitioners looking to improve the mathematics learning experience for all their students this practical and accessible guide provides the knowledge and tools to help every child **Supporting Mathematical Development In The Early Years** Pound, Linda, 2006-05-01 Review of the first edition All the major areas of early childhood maths teaching and learning

Language, Learning, and Culture in Early Childhood Ann Anderson, Jim Anderson, Jan Hare, Marianne McTavish, 2015-12-07 Complex factors affect young children and their families in today's increasingly diverse world characterized by globalization the transnational movement of people and neo liberal government policies in western and industrialized countries This book focuses on three of these factors culture language and learning and how they affect

children's development and learning in the context of their communities, families and schools. Taking an ecological perspective, it challenges normative and hegemonic views of young children's language literacy and numeracy development and offers examples of demonstrated educational practices that acknowledge and build on the knowledge that children develop and learn in culturally specific ways in their homes and communities. The authors highlight issues and perspectives that are particular to Indigenous people who have been subjected to centuries of assimilationist and colonialist policies and practices and the importance of first or home language maintenance and its cognitive, cultural, economic, psychological and social benefits.
