Classic Collection. The Complete Works of H. P. Blavatsky. Works of Henry S. Olcott. Illustrated** H. P. Blavatsky, Henry S. Olcott, Fyodor Dostoyevsky, 2025-02-26 Theosophy is a religion established in the United States during the late 19th century It was founded

primarily by the Russian Helena Blavatsky and draws its teachings predominantly from Blavatsky's writings. Categorized by scholars of religion as both a new religious movement and as part of the occultist stream of Western esotericism, it draws upon both older European philosophies such as Neoplatonism and Asian religions such as Hinduism and Buddhism. At a meeting of the Miracle Club in New York City on 7 September 1875, Blavatsky, Olcott, and Judge agreed to establish an organisation with Charles Sotherton suggesting that they call it the Theosophical Society. Prior to adopting the name Theosophical, they had debated various potential names among them the Egyptological Society, the Hermetic Society, and the Rosicrucian Society. The term was not new but had been previously used in various contexts by the Philaletheians and the Christian mystic Jakob Böhme. Etymologically, the term came from the Greek *theos* (god/s) and *sophia* (wisdom), thus meaning 'god wisdom', 'divine wisdom', or 'wisdom of God'. The term *theosophia* appeared in both Greek and Latin in the works of early church fathers as a synonym for theology. In her book *The Key to Theosophy*, Blavatsky said that the term Theosophy had been coined by the Alexandrian philosophers, especially Ammonius Saccas.

**Mathematics and Art** Lynn Gamwell, 2016

This is a cultural history of mathematics and art from antiquity to the present. Mathematicians and artists have long been on a quest to understand the physical world they see before them and the abstract objects they know by thought alone. Taking readers on a tour of the practice of mathematics and the philosophical ideas that drive the discipline, Lynn Gamwell points out the important ways mathematical concepts have been expressed by artists. Sumptuous illustrations of artworks and cogent math diagrams are featured in Gamwell's comprehensive exploration. Gamwell begins by describing mathematics from antiquity to the Enlightenment, including Greek, Islamic, and Asian mathematics. Then focusing on modern culture, Gamwell traces mathematicians' search for the foundations of their science, such as David Hilbert's conception of mathematics as an arrangement of meaning-free signs, as well as artists' search for the essence of their craft, such as Aleksandr Rodchenko's monochrome paintings. She shows that self-reflection is inherent to the practice of both modern mathematics and art, and that this introspection points to a deep resonance between the two fields. Kurt Gödel posed questions about the nature of mathematics in the language of mathematics, and Jasper Johns asked, 'What is art?' in the vocabulary of art. Throughout, Gamwell describes the personalities and cultural environments of a multitude of mathematicians and artists, from Gottlob Frege and Benoît Mandelbrot to Max Bill and Xu Bing. *Mathematics and Art* demonstrates how mathematical ideas are embodied in the visual arts and will enlighten all who are interested in the

complex intellectual pursuits personalities and cultural settings that connect these vast disciplines      Gems of Geometry John Barnes,2012-08-17 Based on a series of lectures for adult students this lively and entertaining book proves that far from being a dusty dull subject geometry is in fact full of beauty and fascination The author s infectious enthusiasm is put to use in explaining many of the key concepts in the field starting with the Golden Number and taking the reader on a geometrical journey via Shapes and Solids through the Fourth Dimension finishing up with Einstein s Theories of Relativity Equally suitable as a gift for a youngster or as a nostalgic journey back into the world of mathematics for older readers John Barnes book is the perfect antidote for anyone whose maths lessons at school are a source of painful memories Where once geometry was a source of confusion and frustration Barnes brings enlightenment and entertainment In this second edition stimulated by recent lectures at Oxford further material and extra illustrations have been added on many topics including Coloured Cubes Chaos and Crystals      *The Emergence of the Fourth Dimension* Mark Blacklock,2018 This volume examines the emergence of the idea of the fourth dimension in fiction of the fin de siecle and how these new theories of the possibilities of time and space influenced writers such as Joseph Conrad Ford Madox Ford H G Wells Henry James H P Lovecraft and others

**The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition** Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak
