Maths In The Mind A Process Approach To Mental Strategies:

Maths in the Mind Ann Baker, 1991 Maths in the Mind suggests starting points for encouraging children to become fluent and independent thinkers in math lessons. It presents ideas for building on strategies that children acquire naturally before they come to school and outlines a rich variety of strategies that research has found children develop as they become more competent at mathematics. The activities presented in this book encourage children to use and develop these strategies as part of their mathematical thinking across the full range of the primary school. The activities have been extensively trialled in the classroom as the photographs which accompany the text demonstrate. Maths in the Mind emphasizes the processes involved in mathematical thinking rather than the right answer. Children are encouraged to explore to delve into what they do know and this reduces the sense of helplessness that can occur when they don't know what to do. Maths in the Mind complements *Mathematics in Process* also written by Ann and Johnny Baker. Talking Mathematics Rebecca B. Corwin, Judith Storeygard, Sabra Price, 1996 The book is designed for experienced elementary teachers and education students who are interested in supporting talk and building a culture of mathematical inquiry in the classroom. Teaching the Language Arts Cathy Collins Block, 2001 This book explains and demonstrates with a clear step by step approach how communication and thinking competencies can be enhanced through instruction. This revision elaborates further on a language arts program built to focus on the needs of individual students. Each of the fourteen chapters is divided into three sections covering theoretical foundations, practice and professional development, giving the text a practical, usable organization. The second and third sections apply the principles from the first section to the classroom. Features in these sections show specific teaching strategies that offer practical ideas for teachers to develop an ongoing and successful teaching repertoire. For Language Arts teachers. **Unlocking Mathematics Teaching** Valsa Koshy, Jean Murray, 2011-03-28 Now in a fully updated second edition, *Unlocking Mathematics Teaching* is a comprehensive guide to teaching mathematics in the primary school. Combining theory and practice, selected experts outline the current context of mathematics education. The book combines an accessible blend of subject knowledge and pedagogy and its key features include: Advice on teaching mathematics to high and low attainers; Guidance on teaching mental maths; Ideas for incorporating ICT; Guidance on assessment in mathematics education; Teaching problem solving; Numerical and non-numerical examples; Updated references taking into account the Williams Report.
