David Baker, 2002 Developed for the OCR Specification revised for the new National Curriculum and the new GCSE specifications The Teacher File contains detailed support and guidance on advanced planning points of emphasis key words notes for the non specialist useful supplementary ideas and homework sheets **Maths Now!**. R. Pimentel, T. Wall, National Writing Group, 2001 Positive Alternatives to Exclusion Paul Cooper, Mary Jane Drummond, Susan Hart, Jane Lovey, Colleen McLaughlin, 2013-04-03 Positive Alternatives to School Exclusion looks at what schools can do to build more harmonious communities and engage students particularly those at risk of exclusion more productively in all areas of school life It describes the Positive Alternatives to School Exclusion Project a multi phase collaborative initiative based at the School of Education University of Cambridge Drawing on the perspectives of staff and pupils the authors provide detailed case studies of the approaches and strategies being adopted in a variety of settings primary secondary and FE to foster inclusion and reduce and prevent exclusion It also identifies a number of different frameworks drawn from the case studies which can be used by practitioners working in other settings to support their own reflection and development work Particular importance is placed throughout the book on valuing the domain of personal experience in the life of the school community The authors explore this theme in detail suggesting ways in which it might become a priority focus of further development work in schools **What's the Point of School?** Guy Claxton, 2013-10-01 Why the education system is failing our kids and how we can start the revolution that will save our schools With their emphasis on regurgitated knowledge and stressful exams today's schools actually do more harm than good Guiding readers past the sterile debates about City Academies and dumbed down exams Claxton proves that education's key responsibility should be to create enthusiastic learners who will go on to thrive as adults in a swiftly changing dynamic world Students must be encouraged to sharpen their wits ask questions and think for

themselves all without chucking out Shakespeare or the Periodic Table Blending down to earth examples with the latest advances in brain science and written with passion wit and authority this brilliant book will inspire teachers parents and readers of all backgrounds to join a practical revolution and foster in the next generation a natural curiosity and the spirit of adventure

Rationing Education Gillborn, David, Youdell, Deborah, 1999-12-01 This research should make us extremely sceptical that the constant search for higher standards and for ever increasing achievement scores can do much more than put in place seemingly neutral devices for restratification Michael W Apple John Bascom Professor of Curriculum and Instruction and Educational Policy Studies University of Wisconsin Madison Recent educational reforms have raised standards of achievement but have also resulted in growing inequalities based on race and social class School by school league tables play a central role in the reforms These have created an A to C economy where schools and teachers are judged on the proportion of students attaining five or more grades at levels A to C To satisfy these demands schools are embracing new and ever more selective attempts to identify ability Their assumptions and practices embody a new IQism a simple narrow and regressive ideology of intelligence that labels working class and minority students as likely failures and justifies rationing provision to support those often white middle class boys already marked for success This book reports detailed research in two secondary schools showing the real costs of reform in terms of the pressures on teachers and the rationing of educational opportunity It will be important reading for any teacher researcher or policymaker with an interest in equality in education

Pure Mathematics Geoff Mannall, Michael Kenwood, 2000 A syllabus specific textbook providing worked examples exam level questions and many practice exercises in accordance to the new Edexcel AS and Advanced GCE specification

EBOOK: Masculinities in Mathematics Heather Mendick, 2006-06-16 The book speaks to me as one of those texts that will become seminal in mathematics education It is original refreshing and despite a complicated plot points to some ways forward It is engagingly written if at times perhaps a little bit no nonsense in tone It will be of interest to teachers and teacher educators as well as providing a theoretical stance that should inform future research Review from BERJ 2007 The study of mathematics together with other gendered subjects such as science and engineering usually attracts more male than female pupils particularly at more advanced levels In this book Heather Mendick explores this phenomenon addressing the important question of why more boys than girls choose to study mathematics She combines new research with an original theoretical approach to argue that doing mathematics is doing masculinity The book illuminates what studying mathematics means for both students and teachers and offers a broad range of insights into students views and practices In addition to the words of young people learning mathematics the masculinity of mathematics is explored through historical material and cinematic representations Heather Mendick discusses the ways in which the alignment of mathematics with masculinity creates tensions for girls and women doing the subject These tensions are sensitively explored through interviews with young men and women to show how doing mathematics fits or conflicts with their gender identities

Finally the book explores the implications for teachers including ways to promote gender equity in mathematics education This is key reading for students on courses in gender and education mathematics education gender and curriculum and social justice
