J. Hoving, Diederick Wildeman, 2012-03-29 In 1671 Dutch diplomat and scientist Nicolaes Witsen published a book that served among other things as an encyclopedia for the shell first method of ship construction In the centuries since Witsen's rather convoluted text has also become a valuable source for insights into historical shipbuilding methods and philosophies during the Golden Age of Dutch maritime trade However as Andr Wegener Sleeswyk's foreword notes Witsen's work is difficult to access not only for its seventeenth century Dutch language but also for the vagaries of its author's presentation Fortunately for scholars and students of nautical archaeology and shipbuilding this important but chaotic work has now been reorganized and elucidated by A J Hoving and translated into English by Alan Lemmers In *Nicolaes Witsen and Shipbuilding in the Dutch*

Golden Age Hoving master model builder for the Rijksmuseum in Amsterdam sorts out the steps in Witsen's method for building a seventeenth century pinas by following them and building a model of the vessel. Experimenting with techniques and materials, conducting research in other publications of the time and rewriting as needed to clarify and correct some vital omissions in the sequence, Hoving makes Witsen's work easier to use and understand. Nicolaes Witsen and Shipbuilding in the Dutch Golden Age is an indispensable guide to Witsen's work and the world of his topic: the almost forgotten basics of a craftsmanship that has been credited with the flourishing of the Dutch Republic in the seventeenth century. Dr David Griffith, 2011-02-28 In the past thirty years the world of model kits has undergone a veritable revolution. New techniques in injection moulding have improved the scale, accuracy and surface detail of the humble plastic kit, while many specialist companies now produce top quality resin models, vastly broadening the range of subjects on the market. However, the really radical change has been the advent of photo etched brass fret, which allows the finest detail to be reproduced to scale. In ship modelling this has resulted in a new form of the hobby, midway between traditional build from the box, simplicity and the time consuming demands of fabricating everything from scratch. These new materials have prompted innovative techniques which are comprehensively demonstrated in this new manual. Designed for those wishing to achieve the best results from their ship kits in the 1/700 to 1/350 range of scales, it uses step by step photographs to take the reader through the building of two models, one in plastic and one in resin, from basic construction, fittings and detailing to painting, finishing and display. Written by a highly experienced award winning ship modeller, the book is a showcase for the contemporary approach to the hobby. **The Sloop of War, 1650-1763**

Ian McLaughlan, 2020-01-31 A delight fulfills a long felt need to do justice to the smaller ships of war that did such sterling service for the sailing Royal Navy. Ships in Scale is the first study in depth of the Royal Navy's vital but largely ignored small craft. In the age of sail they were built in huge numbers and in far greater variety than the more regulated major warships, so they present a particular challenge to any historian attempting a coherent design history. However, for the first time, this book charts the development of the ancillary types variously described in the 17th century as sloops, ketches, brigantines, advice boats and even yachts, as they coalesce into the single 18th century category of Sloop of War. In this era they were generally two masted, although they set a bewildering variety of sail plans from them. The author traces their origins to open boats like those carried by Basque whalers, shows how developments in Europe influenced English craft and homes in on the relationship between rig, hull form and the duties they were designed to undertake. Visual documentation is scanty, but this book draws together a unique collection of rare and unseen images, coupled with the author's own reconstructions in line drawings and watercolor sketches, to provide the most convincing depictions of the appearance of these vessels. By tackling some of the most obscure questions about the early history of small boat rigs, the book adds a dimension that will be of interest to historians of coastal sail and practical

Constitution - All Sails Up and Flying Olof A. Eriksen, 2009 It was 1989 when I started building a large 1 4 1 foot scale model of Constitution and today 16 years and 18 000 hours later I honestly believe this is how she was rigged during her last chase exactly one hour prior to her last battle against the British HMS Levant and HMS Cyane I had already invested more than four thousand hours in the construction of this model and had intended upon completion of the hull to proceed with the stepping of masts and rigging her just as I had done previously on other models However In February 1992 when Commander Martin presented me with an original typescript of Midshipman Edward Clifford Anderson s notes on the rigging of the ship in 1834 35 at Boston the earliest such specific information known I decided I would follow Midshipman Anderson s directions and record the progress step by step discovering for myself what was done and how This meant creating additional scaled parts relating to sheer poles etc to simulate exactly how the masts and the bowsprit etc were stepped in this era and for this reason Due to the equipment available today and rightfully so I do not believe that Constitution or any ship s from this era will ever again be rigged including the stepping of the masts using sheer poles and tackle only and so I chose while this one and only opportunity lent itself to show this pictorially

Ship Dioramas David Griffith, 2013-10-17 The author of Ship Models from Kits has brought nautical scenes to life in his latest book Daily Record This book is about the art of displaying waterline models By their very nature ship models that do not show the full hull and are not mounted on an artificial stand cry out for a realistic setting At its most basic this can be just a representation of the sea itself but to give the model a context to tell some sort of story is far more challenging In a diorama the composition is a vital element and this book devotes much of its space to what works and what does not and illustrates with photographic examples why the best maritime dioramas have visual power and how to achieve that impact Individual chapters explore themes like having small craft in attendance on the main subject multiple model scenarios dockyards and naval bases and the difficulties of replicating naval combat realistically It also looks at both extremes of modelmaking ambition the small single ship exposition and the largest most ambitious projects of the kind meant for museum display The book concludes with some of the most advanced concepts of how to create drama and the illusion of movement and how to manipulate perspective David Griffith s book is compelling and inspiring littered with practical examples of work in progress simple dioramas to the most complex I highly recommend it to all ship modellers without hesitation

Scale Modelling Now **Waterline Warships** Philip Reed, 2011-02-23 Philip Reed best known for his superb models of ships from the age of sail here turns his attention to the other highly popular subject for ship modelers the warships of the Second World War The book is a step by step manual for building a scratch waterline model of the Ca Class destroyer HMS Caesar the sistership of Cavalier now on display in drydock at Chatham Historical Dockyard These emergency built ships were launched between 1943 and 1945 and Caesar herself was to see action in 1944 on the Russian convoys and then in defense of the Western Approaches The model presented in the book is

built to the scale of 16ft to the inch and is designed to be displayed as a waterline model in a diorama Every aspect is covered from the construction of a bread and butter hull through to the the details of camouflage bridge funnel mast the 4 5in Hazemeyer and Oerlikon guns boats davits depth charge gear torpedo tubes searchlights vents and lockers and the sea itself Ship s plans and a picture gallery at the end of the book devoted to a whole array of the author s WWII model warships complete the book More than fifty years of modeling experience is passed on through wise and practical advice and thus each page will be of the utmost value to scratch builders and to any kit builders who may be setting out to construct a model of a WWII warship **Catalog of Copyright Entries** Library of Congress.
