Martin-Iverson, 1991-08-20 The two *Animal Models in Psychiatry* volumes are loosely organized by subject The first volume contains a number of chapters concerned with schizophrenia psychoses neuroleptic induced tardive dyskinesias and other disorders that may involve dopamine such as attention deficit disorder and mania The second volume deals with affective and anxiety disorders but also includes chapters on subjects not easily classified as either psychotic or affective or an ety related such as aggression mental retardation and memory disorders Four chapters on animal models of schizophrenia or psychoses are included in the present volume because of the importance of these disorders in psychiatry Likewise three chapters in the subsequent volume deal with depression The first of the two volumes begins with an introduction by Paul Willner reviewing the criteria for assessing the validity of animal models in psychiatry He has written extensively on this subject and his thorough description of the issues of various forms of validity provides a framework in which to evaluate the subsequent chapters As will be seen the remaining chapters in both volumes will refer frequently to these issues The second chapter by Melvin Lyon describes a large number of different procedures that have been proposed as potential animal models of schizophrenia This is a departure from the usual format consisting of detailed descriptions of specific models **Deep Learning for Coders with fastai and PyTorch** Jeremy Howard, Sylvain Gugger, 2020-06-29 Deep learning is often viewed as the exclusive domain of math PhDs and big tech companies But as this hands on guide demonstrates programmers comfortable with Python can achieve impressive results in deep learning with little math background small amounts of data and minimal code How With fastai the first library to provide a consistent interface to the most frequently used deep learning applications Authors Jeremy Howard and Sylvain Gugger the creators of fastai show you how to train a model on a wide range of tasks using fastai and PyTorch You'll also dive progressively further into deep learning theory to gain a complete understanding of the algorithms behind the scenes Train models in computer vision natural language processing tabular data and collaborative filtering Learn the latest deep learning techniques that matter most in practice Improve accuracy speed and reliability by understanding how deep learning models work Discover how to turn your models into web applications Implement deep learning algorithms from scratch Consider the ethical implications of your work Gain insight from the foreword by PyTorch cofounder Soumith Chintala **Modeling Farm Decisions For Policy Analysis** Kenneth H Baum, 2019-03-08 Microeconomic modeling has been an important tool for agricultural economists for several decades and promises to be important for addressing the research problems of the 1980s as well This volume explores the possibilities for using micromodeling to analyze how individual farm businesses react to and are affected by farm policies Although this purpose represents only one potential use

of micro modeling effective modeling for policy analysis necessitates a broad look from several historical analytical and institutional perspectives The Micromodeling Conference held November 18 20 1981 at Airlie House Virginia under the auspices of the U S Department of Agriculture s Economic Research Service and the Farm Foundation reflected these concerns

Old Industrial Cities Seeking New Road Of Industrialization: Models Of Revitalizing Northeast China Yanji Ma, Lianjun Tong, Pinyu Zhang, Zhiming Cheng, Mark Yoalin Wang, 2013-11-22

This book aims to investigate how cities in China's rust belt restructure their urban industries and economies. Over the years, China's economic miracle has been mainly attributed to rapid development in its coastal region where the majority of research into the country's development has originated from. Development in the rest of China seems to be attracting relatively scant research attention, especially in China's rust belt. In fact, the urban industrial restructuring process is an ongoing process in inland China, notably in the recent decade in terms of the scope, scale, and speed of restructuring. The old industrial cities in northeast China (Manchuria) were the cradle of China's industrialization and had significantly contributed to the industrialization of the nation during the Mao era. Deng's open door policy and economic reform disadvantaged the region and left it behind others. In the context of market economy and competition from rapidly growing coastal areas, northeast China became the burden to China's overall economic development. With a high concentration of state-owned heavy industries, cities in this region suffered from heavy losses in revenue and massive layoffs of millions of former state-owned enterprise workers, known as the Northeast Phenomenon or Neo-Northeast Phenomenon. The once towering economic giant was down. Such a phenomenon is not uncommon in other rust belt regions in industrialized economies. However, since the implementation of the Chinese Government's Revitalisation Strategy of Northeast China in 2003, cities in northeast China have gone through various transformations. Their recent economic performance has made many Chinese economists predict that northeast China will become China's new growth engine and catch up with the economic performance of other prosperous regional economies such as the Pearl River Delta, Lower Yangtze River Delta, and Beijing-Tianjin region. This book investigates how cities in northeast China are shaking off their economic disadvantages and implementing various forms of restructuring in their industries. The authors identify six different reindustrialization models: namely, Shenyang Tiexi Model (repacking old industries), Dalian Model (beyond the China's coast development model), Daqing Model (extension of industrial chain), Fuxin Model (modern agro-processing saved the coal mining city from ghost town), Jilin city low carbon oriented model, and Central Liaoning Urban Cluster Model (negotiated/agreed industrial division). All these models will be explained through analysis of their approaches, key actors, and mechanisms.

Heat and Mass Transfer Modelling During Drying Mohammad U.H. Joardder, Washim Akram, Azharul Karim, 2021-09-30 Most conventional dryers use random heating to dry diverse materials without considering their thermal sensitivity and energy requirements for drying Eventually excess energy consumption is necessary to attain a low quality dried product Proper heat and mass transfer modelling prior to designing a drying system for selected food materials can overcome these problems Heat and Mass Transfer Modelling During Drying Empirical to Multiscale Approaches extensively discusses the issue of predicting energy consumption in terms of heat and mass transfer simulation A comprehensive mathematical model can help provide proper insight into the underlying transport phenomena within the materials during drying However drying of porous materials such as food is one of the most complex problems in the engineering field that is also multiscale in nature From the modelling perspective heat and mass transfer phenomena can be predicted using empirical to multiscale modelling However multiscale simulation methods can provide a comprehensive understanding of the physics of drying food materials KEY FEATURES Includes a detailed discussion on material properties that are relevant for drying phenomena Presents an in depth discussion on the underlying physics of drying using conceptual visual content Provides appropriate formulation of mathematical modelling from empirical to multiscale approaches Offers numerical solution approaches to mathematical models Presents possible challenges of different modelling strategies and potential solutions The objective of this book is to discuss the implementation of different modelling techniques ranging from empirical to multiscale in order to understand heat and mass transfer phenomena that take place during drying of porous materials including foods pharmaceutical products paper leather materials and more
