Foundations of Multi-Paradigm Modelling for Cyber-Physical Systems Paulo Carreira, Vasco Amaral, Hans Vangheluwe, 2020-05-07 This open access book coherently gathers well founded information on the fundamentals of and formalisms for modelling cyber physical systems CPS Highlighting the cross disciplinary nature of CPS modelling it also serves as a bridge for anyone entering CPS from related areas of computer science or engineering Truly complex engineered systems known as cyber physical systems that integrate physical software and network aspects are now on the rise However there is no unifying theory nor systematic design methods techniques or tools for these systems Individual mechanical electrical network or software engineering disciplines only offer partial solutions A technique known as Multi Paradigm Modelling has recently emerged suggesting to model every part and aspect of a system explicitly at the most appropriate level s of abstraction using the most appropriate modelling formalism s and then weaving the results together to form a representation of the system If properly applied it enables among other global aspects performance analysis exhaustive simulation and verification This book is the first systematic attempt to bring together these formalisms for anyone starting in the field of CPS who seeks solid modelling foundations and a comprehensive introduction to the distinct existing techniques that are multi paradigmatic Though chiefly intended for master and post graduate level students in computer science and engineering it can also be used as a reference text for practitioners

Saturated Switching Systems Abdellah Benzaouia,2012-03-30 Saturated Switching Systems treats the problem of actuator saturation inherent in all dynamical systems by using two approaches positive invariance in which the controller is designed to work within a region of non saturating linear behaviour and saturation technique which allows saturation but guarantees asymptotic stability The results obtained are extended from the linear systems in which they were first developed to switching systems with uncertainties 2D switching systems switching systems with Markovian jumping and switching systems of the Takagi Sugeno type The text represents a thoroughly referenced distillation of results obtained in this field during the last decade The selected tool for analysis and design of stabilizing controllers is based on multiple Lyapunov functions and linear matrix inequalities All the results are illustrated with numerical examples and figures many of them being modelled using MATLAB Saturated Switching Systems will be of interest to academic researchers in control systems and to professionals working in any of the many fields where systems are affected by saturation including chemical and

pharmaceutical batch processing manufacturing for example in steel rolling air traffic control and the automotive and aerospace industries
