Knowing from the Inside Tim Ingold, 2022-02-24 Knowledge comes from thinking with from and through things not just about them We get to know the world around us from the inside of our being in it Drawing on the fields of anthropology art architecture and education this book addresses what knowing from the inside means for practices of teaching and learning If knowledge is not transmitted ready made independently of its application in the world but grows from the crucible of our engagements with people places and materials then how can there be such a thing as a curriculum What forms could it take And what could it mean to place such disciplines as anthropology art and architecture at the heart of the curriculum rather than as at present on the margins In addressing these questions the fifteen distinguished contributors to this volume challenge mainstream thinking about education and the curriculum and suggest experimental ways to overcome the stultifying effects of current pedagogic practice

The Material Culture of Basketry Stephanie Bunn, Victoria Mitchell, 2020-10-29 The Material Culture of Basketry celebrates basketry as a culturally significant skilled practice and as a theoretically rich discipline which has much to offer contemporary society While sometimes understudied and underappreciated it has much in common with mathematics and engineering art craft and design and can also act as a socially beneficial source of skill and care Contributors show how local knowledge of materials plants and place are central to the craft Case studies include the skill in weaverbird nest building challenging how we perceive learning in craft and nature an engineer's perspective on twining Peruvian grass bridges and the local knowledge embodied in Pacific plaited patterns and knots Photo essays explore materials and techniques from the point of view of artists anthropologists and mathematicians revealing how the structure

and skill in basketwork illustrate a significant form of textile technology. Thus the book argues that the textures, patterns and geometric forms that emerge through basketwork reflect an embodied knowledge which expresses mathematical and engineering comprehension. The therapeutic value of the craft is recognised through a selection of case studies which consider basketry as a healing process for patients with brain injury, mental health problems and as a memory aid for people living with dementia. This reclaims basketry's significant role in occupational therapy as an agent of recovery and well-being. Finally, basketry's inherently sustainable nature is also considered, demonstrating the continuation of basketry in spite of handwork's general decline and profiling new and recycled materials. Above all, the book envisages basketry as an intellectually rewarding means of knowing. It presents the craft as embodying care for skilled making and for the social and natural environments in which it flourishes.

The Basket Weavers Amelia Khatri, AI, 2025-02-12. *The Basket Weavers* explores the comprehensive history of basket weaving, highlighting its evolution from functional necessity to a significant art form across various cultures. The book argues that basket weaving offers a unique perspective on the link between human culture, technology and the environment. Interestingly, basket weaving predates pottery in many societies, demonstrating its early importance. The book also showcases how different cultures adapted readily available natural resources to suit their regional climates and needs. The book begins by introducing fundamental techniques and materials, progressing to specific regional traditions like Native American coiling, East Asian bamboo weaving and European willow work. Each regional study examines the environmental context, historical development and cultural significance of basketry. By focusing on the social and economic roles of basket weavers, the book emphasizes how this craft has historically supported communities worldwide and continues to evolve as a contemporary art form.
