format of clinical case study This format is also consistent with the daily practice of hematopathologists and with the pattern in all the specialty board examinations Therefore it is a good learning tool for the pathology residents hematology fellows as well as medical students This proposed book will present 83 clinical cases with clinical history morphology of the original specimen and a list of differential diagnoses This is followed by further testing with pictures to show the test results At the end a correct diagnosis is rendered with subsequent brief discussion on how the diagnosis is achieved A few useful references will be cited and a table will be provided for differential diagnosis in some cases The major emphasis is the provision of 500 color photos of peripheral blood smears bone marrow aspirates core biopsy lymph node biopsy and biopsies of other solid organs that are involved with lymphomas and leukemias Pictures of other diagnostic parameters such as flow cytometric histograms immunohistochemical stains cytogenetic karyotypes fluorescence in situ hybridization and polymerase chain reaction will also be included A comprehensive approach with consideration of clinical morphologic immunophenotypic and molecular genetic aspects is the best way to achieve a correct diagnosis After reading this book the reader will learn to make a diagnosis not only based on the morphology alone but also in conjunction with other parameters
