Award-winning author Alex Hutchinson unveils the 100 greatest inventions of the modern era, starting with the discovery of the transistor in 1947, complete with original photographs and anecdotes about their creation. For example, a candy bar melting in a scientist's pocket during an experiment led to the invention of the microwave oven. Hutchinson consulted 25 experts at 17 museums and universities; their collective expertise spans aeronautics, automobiles, biology, computers, medicine, physics, and a host of other fields. The result includes some well-known breakthroughs like the laser, in vitro fertilization, as well as a host of surprises like waffle sole running shoes, the pull-top can. This charming book will delight, fascinate, and educate. *The Modern Invention of Medieval Music* Daniel Leech-Wilkinson, 2002-10-17 Medieval music has been made and remade over the past two hundred years. For the nineteenth century, it was vocal without instrumental accompaniment but with barbarous harmony that no one could have wished to hear. For most of the twentieth century, it was instrumentally accompanied, increasingly colourful, and increasingly enjoyed. At the height of its popularity, it sustained an industry of players and instrument makers all engaged in recreating an apparently medieval performance practice. During the 1980s, it became vocal once more, exchanging colour and contrast for cleanliness and beauty. But what happens to produce such radical changes of perspective? And what can we learn from them about the way we interact with the past? How much is really known about the way medieval music sounded? Or have modern beliefs been formed and sustained less by evidence than the personalities of scholars and performers, their ideologies and their musical tastes. **Universalism: a Modern Invention, and Not According to Godliness** Andrew Royce, 2025-08-02 Reprint of the original first published in 1839. The Invention of Discovery, 1500-1700 Dr James Dougal Fleming,2013-05-28 The early modern period used to be known as the Age of Discovery More recently it has been troped as an age of invention But was the invention discovery binary itself invented or discovered This volume investigates the possibility that it was invented through a range of early modern knowledge practices centered on the emergence of modern natural science From Bacon to Galileo from stagecraft to math from martyrology to romance contributors to this interdisciplinary collection examine the period s generation of discovery as an absolute and ostensibly neutral standard of knowledge production They further investigate the hermeneutic implications for the epistemological authority that tends in modernity still to be based on that standard The Invention of Discovery 1500 1700 is a set of attempts to think back behind discovery considered as a decisive trope for modern knowledge
