Developmental Psychology A Student s Handbook is a major textbook that provides an up to date account of theory and research in the rapidly changing field of child development Margaret Harris and George Butterworth have produced an outstanding volume that includes recent research from Britain Europe and the USA The text is designed for undergraduate students who have little or no prior knowledge of developmental psychology Key features include Specially designed textbook features such as key term definitions chapter summaries and annotated further reading sections Over 95 figures and tables to illustrate principles described in the text Additional boxed material to add further insight and aid understanding Clear user friendly layout to make topics easy to locate The book places developmental psychology in its historical context tracing the emergence of the field as an independent discipline at the end of the 19th century and following the radical changes that

have occurred in our understanding of children's development since then. The development of the child is covered in sequence through conception, pre-natal development, birth, infancy and the pre-school years to the achievements of the school years and the changes that occur during adolescence. Each period is addressed in terms of cognitive, social and linguistic development, including discussion of reading, spelling and mathematical development. There is also consideration of comparative research concerning the development of cognitive abilities in other primates. **Developmental Psychology A Student's Handbook** is essential reading for all undergraduate students of developmental psychology. It will also be of interest to those in education and healthcare studying child development.

Mathematics in Nursery Education, Second Edition Ann Montague-Smith, 2014-05-22. This Second Edition covers the mathematics needed to teach the Early Learning Goals. It has been updated to include new research findings as well as new topics, for example using number lines with young children. The topics of counting, number, including early addition and subtraction, pattern, measures and shape and space are covered in detail. Each chapter contains suggestions for key questions to ask in order to encourage children to discuss their mathematics and to demonstrate what they know and understand. There are sections on developing problem-solving skills, working with parents and other adults in the nursery setting as well as detailed charts giving ideas for activities and how to assess learning and some activities planned in full. The final chapter gives detailed help with planning and assessment of mathematics. The book is intended for anyone working with children in the early years: teachers, nursery nurses, classroom assistants, playgroup leaders and workers, child minders and day care staff. It is particularly suitable as a course text for those training to be teachers either through the undergraduate route or through a PGCE and for those studying for early childhood degrees or diplomas.

History of Number Kay Owens, Glen Lean, Patricia Paraide, Charly Muke, 2017-10-24. This unique volume presents an ecocultural and embodied perspective on understanding numbers and their history in indigenous communities. The book focuses on research carried out in Papua New Guinea and Oceania and will help educators understand humanity's use of numbers and their development and change. The authors focus on indigenous mathematics education in the early years and shine light on the unique processes and number systems of non-European styled cultural classrooms. This new perspective for mathematics education challenges educators who have not heard about the history of number outside of Western traditions and can help them develop a rich cultural competence in their own practice and a new vision of foundational number concepts such as large numbers, groups and systems. Featured in this invaluable resource are some data and analyses that chief researcher Glendon Angove Lean collected while living in Papua New Guinea before his death in 1995. Among the topics covered: The diversity of counting system cycles where they were established and how they may have developed. A detailed exploration of number systems other than base 10 systems including 2 cycle, 5 cycle, 4 and 6 cycle.

systems and body part tally systems Research collected from major studies such as Geoff Smith's and Sue Holzknecht's studies of Morobe Province's multiple counting systems Charly Muke's study of counting in the Wahgi Valley in the Jiwaka Province and Patricia Paraide's documentation of the number and measurement knowledge of her Tolai community The implications of viewing early numeracy in the light of this book's research and ways of catering to diversity in mathematics education In this volume Kay Owens draws on recent research from diverse fields such as linguistics and archaeology to present their exegesis on the history of number reaching back ten thousand years ago Researchers and educators interested in the history of mathematical sciences will find *History of Number Evidence from Papua New Guinea and Oceania* to be an invaluable resource
