Mock, 2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Glaciers and Glaciation, 2nd edition Douglas Benn, David J A Evans, 2014-02-04 *Glaciers and Glaciation* is the classic textbook for all students of glaciation Stimulating and accessible it has established a reputation as a comprehensive and essential resource In this new edition the text references and illustrations have been thoroughly updated to give today's reader an up to the minute overview of the nature origin and behaviour of glaciers and the geological and geomorphological evidence for their past history on earth The first part of the book investigates the processes involved in forming glacier ice the nature of glacier climate relationships the mechanisms of glacier flow and the interactions of glaciers with other natural systems such as rivers lakes and oceans In the second part the emphasis moves to landforms and sediment the interpretation of the earth's glacial legacy and the reconstruction of glacial depositional environments and palaeoglaciology **Treatise on Geomorphology**, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate

students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

European Glacial Landscapes David Palacios, Philip D. Hughes, Vincent Jomelli, Luis M. Tanarro, 2023-10-21 European Glacial Landscapes The Holocene presents the current state of knowledge on glacial landscapes of Europe and nearby areas over the Holocene to deduce the influence of atmospheric and oceanic currents and the insolation forcing variability and volcanic activity on Holocene paleoclimates the existence of asynchronies in the timing of occurrence of glacier expansion and shrinkage during the Holocene time lags between the identification of oceanic and atmospheric changes and those occurring in glacial extension during the Holocene the role of Holocene glaciers on the climate of Europe and on sea level variability and the delimitation of landscapes that need special protection Students academics and researchers in Geography Geology Environmental Sciences Physics and Earth Science departments will find this book provides novel findings of all the major European Regions in a single publication with updated information about Holocene glacial geomorphology and paleo climatology and clear figures that model the landscapes covered Provides a synthesis and summary of glacial processes in Europe over the Holocene period

Griffiths,C.J. Martin,2017-10-18 The Engineering Group of the Geological Society Working Party brought together experts in glacial and periglacial geomorphology Quaternary history engineering geology and geotechnical engineering to establish best practice when working in former glaciated and periglaciated environments The Working Party addressed outdated terminology and reviewed the latest academic research to provide an up to date understanding of glaciated and periglaciated terrains This transformative state of the art volume is the outcome of five years of deliberation and synthesis by the Working Party This is an essential reference text for practitioners students and academics working in these challenging ground conditions The narrative style and a comprehensive glossary and photo catalogue of active and relict sediments structures and landforms make this material relevant and accessible to a wide readership **Sea Ice** David N. Thomas,2017-03-06 Over the past 20 years the study of the frozen Arctic and Southern Oceans and sub arctic seas has progressed at a remarkable pace This third edition of Sea Ice gives insight into the very latest understanding of the how sea ice is formed how we measure and model its extent the biology that lives within and associated with sea ice and the effect of climate change on its distribution How sea ice influences the oceanography of underlying waters and the influences that sea ice has on humans living in Arctic regions are also discussed Featuring twelve new chapters this edition follows two previous editions 2001 and 2010 and the need for this latest update exhibits just how rapidly the science of sea ice is developing The 27 chapters are written by a team of more than 50 of the worlds leading experts in their fields These combine to make the book the most comprehensive introduction to the physics chemistry biology and geology of sea ice that there is This third edition of Sea Ice will be a key resource for all policy makers researchers and students who work with the frozen oceans and seas The Industrial Transformation of Subarctic Canada Liza Piper,2010-01-01 Between 1821 and 1960 industrial economies took root in the North transgressing political geographies and superseding the historically dominant fur trade Imported southern scientists and sojourning labourers worked the Northwest and its industrial history bears these newcomers imprint This book reveals the history of human impact upon the North It provides a baseline grounded in historical and scientific evidence for measuring subarctic environmental change Liza Piper examines the sustainability of industrial economies the value of resource exploitation in volatile ecosystems and the human consequences of northern environmental change She also addresses northern communities historical resistance to external resource development and their fight for survival in the face of intensifying environmental and economic pressures Global Environmental Change Antoinette Mannion,2014-09-19 Now in its second edition This text has been extensively revised and rewritten to reflect the growth in environmental research during the last decade Human induced environmental change is occurring at such a rapid rate that inevitably the fundamental processes

involved in biogeochemical cycling are being altered Global Environmental Change considers alterations to the biogeochemical cycles of carbon nitrogen sulphur and other elements as a result of industrial technological development and agriculture which have significantly altered the natural environment The book adopts a temporal and spatial approach to environmental change beginning with the natural environmental change of the Quaternary period and continuing with the culturally induced change since the inception of agriculture 10 000 years ago

Coastline Changes Jan Harff, William W. Hay, Daniel M. Tetzlaff, 2007-01-01 This volume contributes to the current discussion of the role of natural and anthropogenic driving forces for coastal processes and their socioeconomic consequences Special attention is paid to computerized tools that allow us based on reconstruction of paleodevelopments to predict the interference of processes on different time scales On the one hand the book provides an overview of the current model developments in describing vertical crustal movement climate change forcing sea level variations the genesis of the basin fill along continental margins and the interference of these processes in coastal development On the other hand it describes coastal development in key areas for different climate zones and geological settings Coastline Changes is addressed to students and professionals in the geosciences archaeology social sciences economy and computer sciences It will foster interdisciplinary discussion for the purpose of developing integrated concepts for sustainable development of the coastal zones Publisher's website

M. Clary, E.J. Pyle, W.M. Andrews, 2024-07-23 The contributions in this book explore several geologically significant sites and in doing so acknowledge and explore not just the geological exposures themselves but also the people and issues that are fundamentally intertwined with the history of our science and its impact on our society Through selective examples of outcrops and locales integral to the history of geology we explore the evolution of modern geology as well as the geodiversity and geoheritage of our planet While the volume is far from comprehensive the chapters contained herein detail a range for geoheritage value scale of geoheritage sites and potential for geoheritage opportunities that will promote a broader richer understanding of the complexity of the geoheritage of Earth Importantly many chapters offer a cautionary tale of sites almost lost to posterity and submit their take away lessons for community mobilization towards geoheritage site protection *Sand Dunes of the Northern Hemisphere: Distribution, Formation, Migration and Management* Lu Qi, Mahesh K. Gaur, Victor R. Squires, 2023-12-15 Volume 2 of the book *Sand Dunes of the Northern Hemisphere* is sub titled Characteristics Dynamics and Provenance of Sand Dunes in the Northern Hemisphere It brings together a vast body of information and insight into sand dune and desert systems from North Asia Central Asia North Africa and the Middle East Chapters from the Russian Federation include studies on dune systems within the permafrost zone and there is a case study from temperate zone dune system in coastal Japan Volume 2 Characteristics Dynamics and Provenance of Sand Dunes in the Northern Hemisphere of 16 chapters in three Parts focusses on Saharan Africa Egypt and Middle East and gives attention to sand mobility and encroachment with case studies from a number of countries where these matters are of concern We also include chapters on the remote dunes in the permafrost zone and in the hyper arid deserts of Iran Case studies are used to highlight the characteristics of dunes and their interaction with humans in several widely divergent settings Volume 2

concludes with some musing on the value of study of the past as key to the future and speculates on what the future might hold in the light of a warmer and drier Earth and a rise in sea level that threaten large tracts of low lying land with marine incursions and destruction from storm surge

PART 4 Sand Mobility and Encroachment The seven chapters in this Part examine the real world impact of sand encroachment and dune migration on people and their economic activities and the health welfare and financial implications related to destruction of infrastructure including human habitations

PART 5 Sand Dune Landscapes Distribution Formation and Management Seven Case studies from several geographic regions in Africa the Middle East north east Asia are presented here to demonstrate the underlying mechanisms in dune formation and the diverse approaches to their management Human impacts such as sand mining tourism development combine with natural forces like climate variability to challenge the realization of an optimum management strategy

PART 6 Concluding Thoughts Coping with an Unknown Future from a Little known Past The two chapters in Part 6 have special roles We are privileged to publish new research findings that are summarized here in Chapter 38 from extensive and detailed work conducted in the Kyzyl Kum and Karakum sand seas of Central Asia There is a strong belief that further study of the little known past such as revealed in this study could unlock clues as to what a future Earth might look like This leads on to speculation in Chapter 39 about the implications of what we already know about global change not only climate change and the impact of the Anthropocene on the dune systems both inland and coastal Sea level rise marine incursions and an increase in extreme weather events will affect dune systems and sand seas on the Northern Hemisphere and beyond
