

The background features a dark blue field with vibrant, multi-colored diagonal stripes on the left and right sides. The stripes include shades of red, orange, yellow, green, and blue. On each side, there are two stylized, white-outlined glasses. The top pair is a classic panto shape, while the bottom pair is a more modern, rounded design. The text is centered in the middle of the image.

Web Design in a Nutshell Jennifer Niederst Robbins,2006-02-21 Are you still

designing web sites like it's 1999. If so, you're in for a surprise. Since the last edition of this book appeared five years ago, there has been a major climate change with regard to web standards. Designers are no longer using X HTML as a design tool, but as a means of defining the meaning and structure of content. Cascading Style Sheets are no longer just something interesting to tinker with, but rather a reliable method for handling all matters of presentation, from fonts and colors to the layout of the entire page. In fact, following the standards is now a mandate of professional web design. Our popular reference, *Web Design in a Nutshell*, is one of the first books to capture this new web landscape with an edition that's been completely rewritten and expanded to reflect the state of the art. In addition to being an authoritative reference for X HTML and Cascading Style Sheets, this book also provides an overview of the unique requirements of designing for the Web and gets to the nitty-gritty of JavaScript and DOM Scripting, web graphics optimization, and multimedia production. It is an indispensable tool for web designers and developers of all levels. The third edition covers these contemporary web design topics: Structural layer: HTML 4.01 and XHTML 1.0.9; chapters including an alphabetical reference of all elements, attributes, and character entities; Presentation layer: Ten all-new chapters on Cascading Style Sheets Level 2.1, including an alphabetical reference of all properties and values; Behavior layer: JavaScript and scripting with the Document Object Model (DOM) Web environment. New web standards, browsers, display devices, accessibility, and internationalization; Web graphics optimization; Producing lean and mean GIF, JPEG, PNG, and animated GIFs; Multimedia: Web audio, video, Flash, and PDF. Organized so that readers can find answers quickly, *Web Design in a Nutshell, Third Edition* helps experienced designers come up to speed quickly on standards-based web design and serves as a quick reference for those already familiar with the new standards and technology. There are many books for web designers, but none that address such a wide variety of topics. Find out why nearly half a million buyers have made this the most popular web design book available.

Applied Statistics for the Social and Health Sciences
Rachel A. Gordon, 2012-07-26

Applied Statistics for the Social and Health Sciences provides graduate students in the social and health sciences with the basic skills that they need to estimate, interpret, present, and publish statistical models using contemporary standards. The book targets the social and health science branches such as human development, public health, sociology, psychology, education, and social work, in which students bring a wide range of mathematical skills and have a wide range of methodological affinities. For these students, a successful course in statistics will not only offer statistical content but will also help them develop an appreciation for how statistical techniques might answer some of the research questions of interest to them. This book is for use in a two-semester graduate course sequence covering basic univariate and bivariate statistics and regression models for nominal and ordinal outcomes, in addition to covering ordinary least squares regression. Key features of the book include interweaving the teaching of statistical concepts with examples developed for the course from publicly available social science data or drawn from the literature; thorough integration of teaching statistical theory with teaching data processing and analysis; teaching of both SAS and Stata side by side; and use of chapter exercises in which

students practice programming and interpretation on the same data set and course exercises in which students can choose their own research questions and data set This book is for a two semester course For a one semester course see <http://www.routledge.com/9780415991544>
