Epilepsy and the Corpus Callosum Alexander G. Reeves, 2013-11-11 In July 1982 the first Dartmouth workshop on the corpus callosum took place A nucleus of basic and clinical scientists was convened to give progress reports of their work on the corpus callosum This text was subsequently compiled by the various participants from these reports modified by a stimulating cross fertilization of ideas and subsequent studies Four and one half decades have intervened since Van Wagenen first sectioned the corpus callosum for epilepsy Van Wagenen and Herren 1940 and Erickson 1940 demonstrated that the corpus callosum is the major route for generalization of experimentally induced focal cortical epilepsy During the succeeding 45 years a handful of clinicians has pursued these leads to confirm the therapeutic value of callosotomy for some types of medically intractable generalized epilepsy Parallel experimental studies with a number of epilepsy models have indicated that the corpus callosum is indeed the major route for seizure generalization that the brainstem is a secondary and more resistant pathway for seizure generalization and that most if not all epileptic seizures originate from the cerebral cortex The unexpected clinical finding that even partial focal seizure incidence is modified by callosotomy now has been demonstrated in the laboratory The various contributors to the clinical and experimental epilepsy sections of this volume have been seminal in these elucidations as will be evident from their chapters The section on the development anatomy and physiology of the corpus callosum demonstrates that these basic areas of study have not been neglected

in 1990 How we perceive and respond to the visual image has been a traditional concern of psychologists philosophers and art historians Today where the visual image increasingly permeates our everyday life and consciousness the question becomes ever more relevant How do we for instance instinctively know what it is that a picture represents without having to be taught How is it that we experience aesthetic pleasure in looking at certain pictures How is it that we often want to talk about the pictures we look at Such questions are currently asked by a wide range of disciplines including semiotics psychoanalysis anthropology neuropsychology and in general contemporary critical analysis of the visual arts In A

Transformational Theory of Aesthetics Michael Stephan breaks new ground by linking the findings of these areas Drawing on their common area of knowledge he has developed a radically new theory of picture perception and aesthetic response arguing that images can generate in us a complex pattern of mental changes or transformations This is because the left and right hemispheres of the brain do not always work in harmony hence the wide ranging nature of aesthetic response to distinct art forms A Transformational Theory of Aesthetics is essential reading to those seriously involved in linking the arts and cognitive sciences

The third edition includes a global perspective of auditory processing, including the latest in evidence-based treatment programs. Content has been edited to be more concise and user-friendly for increased readability and comprehension. Contributions are from the field's most recognized experts, such as Gail Chermak, Frank Musiek, Jack Katz, Harvey Dillon, Gail Richards, and Teri Bellis. **NEW TO THIS EDITION:** New chapters address neurological brain damage and its impact on auditory processing, psychiatric disorders associated with auditory processing, the impact of otitis media on auditory processing skills, and new methods for diagnosing APD. Personality in Search of Individuality Nathan Brody, 2013-10-22 In this, his fourth book published by Academic Press, the author pursues current theories in the expansive field of personality research. Presenting a unique perspective on recent developments in the field, the emphasis is on empirical research. Topics discussed include stability and change in traits, the behavior genetics of traits, a review and defense of trait theory, and a comprehensive review of research on the unconscious.

Human Cognitive Neuropsychology Andrew W. Ellis, Andrew W. Young, 2013-05-24 This textbook augments the first edition through the inclusion of a set of research and review papers selected by the authors to supplement the contents of each chapter by providing a discussion of research issues and detailed investigation of individual cases. One or two papers supplement each chapter. A short introduction to each set makes clear the nature of their

contribution and how they relate to each chapter's contents. Some of the papers are short reviews of theoretical contributions; others are case studies in the tradition of cognitive neuropsychology. At least three of the main trends discernible in cognitive neuropsychology in the 1990s are represented in the chosen papers. The first is the use of connectionist models to simulate patterns of impairment in brain-injured patients. The second is the growing convergence between cognitive neuropsychology and neuroscience: cognitive neuropsychologists are becoming increasingly interested in the brain processes that underlie the preserved and damaged psychological processes they study. The third trend is the involvement of cognitive neuropsychologists in work on therapy and rehabilitation.
