*Independent Commission on Banking final report* Independent Commission on Banking, 2011-09-13 The Independent Commission on Banking's final recommendations aim to create a more stable and competitive basis for UK banking for the long term The result would be a banking system that is much less likely to cause or succumb to financial crises and the huge costs they bring is self reliant so that the taxpayer does not have to bear the losses that banks make and is effective and efficient at providing the basic banking services of safeguarding retail deposits operating secure payments systems and efficiently channelling savings to productive investments in the economy Stability is crucial and UK banks should have more equity capital and loss absorbing debt beyond what has so far been internationally agreed and their retail banking activities should be structurally separated by a ring fence from wholesale and investment banking activities The Commission also address competition which has not been properly effective in UK retail banking They recommend a seamless switching system based on redirection for personal and small business current accounts free of cost and risk complemented by measures to enhance transparency The new Financial Conduct Authority should have a clear duty to promote effective competition Structural reform should be complete by the Basel implementation date of 2019 at the latest These reforms would result in better capitalised less leveraged banking more focused on the needs of savers and borrowers in the domestic economy At the same time UK banks would be free to flourish in global markets but without UK taxpayer support

Snoxell,2013-04-17 Technology now affects almost every aspect of Water Supply Management Operation Planning and Design the speed of development means that assessing what is new is sometimes difficult Old ideas can now be applied because of new technology technology is now revealing problems that were unnoticed 10 years ago Some emerging technologies promise much but are still underdeveloped for use in real world conditions while we should always remember that new technology depends upon the state of development in respective countries a point which is particularly relevant to the NATO Advanced Study Institute for which this book has been produced Thus our objective in producing the book has been to highlight in a wide range of technical areas where and how technology is being applied what is new and what the limitations of these technologies are in the real world We have also tried to provide an European and American perspective where possible to illustrate how problems are tackled in different cultural environments It is probably true that technology is also somewhat dependent upon the political economic and organisational climate in different countries and we have included a chapter covering these aspects
