Dalezios,2017-02-15 From the beginning of 21st century there has been an awareness of risk in the environment along with a growing concern for the continuing potential damage caused by hazards In order to ensure environmental sustainability a better understanding of natural disasters and their impacts is essential It has been recognized that a holistic and integrated approach to environmental hazards needs to be attempted using common methodologies such as risk analysis which involves risk management and risk assessment Indeed risk management means reducing the threats posed by known hazards whereas at the same time accepting unmanageable risks and maximizing any related benefits The risk management framework involves evaluating the importance of a risk either quantitatively or qualitatively Risk assessment comprises three steps namely risk identification data base event monitoring statistical inference risk estimation magnitude frequency economic costs and risk evaluation cost benefit analysis Nevertheless the risk management framework also includes a fourth step risk governance i e the need for a feedback of all the risk assessment undertakings There is currently a lack of such feedback which constitutes a serious deficiency in the reduction of environmental hazards This book emphasises methodological approaches and procedures of the three main components in the study of environmental hazards namely forecasting nowcasting before monitoring during and assessment after based on geoinformatic technologies and data and simulation through examples and case studies These are considered within the risk management framework and in particular within the three components of risk assessment namely risk identification risk estimation and risk evaluation This approach is a contemporary and innovative procedure and constitutes current research in the field of environmental hazards *Environmental Hazards Methodologies for Risk Assessment and Management* covers hydrological hazards floods droughts storms hail desertification biophysical hazards frost heat waves epidemics forest fires geological hazards landslides snow avalanches tectonic hazards earthquakes volcanoes and technological hazards This book provides a text and a resource on environmental hazards for senior undergraduate students graduate students on all courses related to environmental hazards and risk assessment and management It is a valuable handbook for researchers and professionals of environmental science environmental economics and management and engineering Editor Nicolas R Dalezios University of Thessaly Greece

Fabbri, 2022-12-12 Research and industrial developments in the theoretical and practical aspects of safety and security engineering are the focus of this volume This field due to its special nature is an interdisciplinary area of research and application that brings together in a systematic way many disciplines of engineering from the traditional to the most technologically advanced The included papers which were originally presented at the 13th Conference on Risk Analysis Hazard Mitigation and Safety and Security Engineering cover areas such as crisis management security engineering natural disasters and emergencies terrorism IT security man made hazards pandemics transportation security protection and mitigation issues among others Also covered are various aspects of risk management and hazard mitigation associated with both natural and anthropogenic hazards Current events help to emphasise the importance of the analysis and management of risk to planners and researchers around the world Natural hazards such as floods earthquakes landslides fires epidemics transportation climate change fake news and others have always affected human societies The more recent emergence of the importance of man made hazards is a consequence of the rapid technological advances made in the last few centuries The interaction of natural and anthropogenic risks adds to the complexity of the problems

**Risk and Society: The Interaction of Science, Technology and Public Policy** M Waterstone, 2012-12-06 Life in the last quarter of the twentieth century presents a baffling array of complex issues The benefits of technology are arrayed against the risks and hazards of those same technological marvels frequently though not always arising as side effects or by products This confrontation poses very difficult choices for individuals as well as for those charged with making public policy Some of the most challenging of these issues result because of the ability of technological innovation and deployment to outpace the capacity of institutions to assess and evaluate implications In many areas the rate of technological advance has now far outstripped the capabilities of institutional monitoring and control While there are many instances in which technological

advance occurs without adverse consequences and in fact yields tremendous benefits frequently the advent of a major innovation brings a wide array of unforeseen and to some undesirable effects This problem is exacerbated as the interval between the initial development of a technology and its deployment is shortened since the opportunity for cautious appraisal is decreased

*The EU Internal Security Strategy: Report 17th Report of Session 2010-12* Great Britain. Parliament. House of Lords. European Union Committee, 2011 Following the Treaty of Lisbon The European Council has been given the power to adopt and implement an internal security strategy it did so in March 2010 and this was followed in November by a Commission communication setting out the priorities and how to implement them The communication sets out five steps towards a more secure Europe The disruption of international crime networks The prevention of terrorism security in cyberspace improved border management and increased resilience to crises and disasters Of these cyber security is a comparative newcomer and it is now clear that it can lead to massive disruption of state infrastructure and can be used for espionage terrorism even war As such much of the evidence received concerned the role which the EU might play in fighting cyber attacks The Commission's main proposal is to set up a new Cybercrime Centre This might be no more than a talking shop but it could become a useful tool for investigating and analysing past attacks improving law enforcement and preventing future attacks Much will depend on whether it is given adequate resources The Committee looked at the implementation of the strategy and at the way in which it overlaps with national and international strategies In the hope that they can be mutually supportive The Council has a new committee which under the Treaties has the duty of coordinating all the work on internal security Unless it does so effectively very little can be achieved if it properly fulfils its mandate The EU may play a valuable role in protecting the security of its citizens
