Risk Analysis And Uncertainty In Flood Damage Reduction Studies:

Risk Analysis and Uncertainty in Flood Damage Reduction Studies National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on Risk-Based Analysis for Flood Damage Reduction, 2000-10-20 Reducing flood damage is a complex task that requires multidisciplinary understanding of the earth sciences and civil engineering In addressing this task the U S Army Corps of Engineers employs its expertise in hydrology hydraulics and geotechnical and structural engineering Dams levees and other river training works must be sized to local conditions geotechnical theories and applications help ensure that structures will safely withstand potential hydraulic and seismic forces and economic considerations must be balanced to ensure that reductions in flood damages are proportionate with project costs and associated impacts on social economic and environmental values A new National Research Council report Risk Analysis and Uncertainty in Flood Damage Reduction Studies reviews the Corps of Engineers risk based techniques in its flood damage reduction studies and makes recommendations for improving these techniques Areas in which the Corps has made good progress are noted and several steps that could improve the Corps risk based techniques in engineering and economics applications for flood damage reduction are identified The report also includes recommendations for improving the federal levee certification program for broadening the scope of flood damage reduction planning and for improving communication of risk based concepts *Workshop on Risk-based Analysis for Flood Damage Reduction Studies, 18-21 October 1994, Omaha, Nebraska, 1994* *Upper Des Plaines River Flood Damage Reduction Study, 1999*

Job,2022-05-29 Groundwater is a vitally important resource and as its use increases the available supply is depleted creating a ripple effect of impacts on both the environment and the economy that need to be disseminated to a larger audience of students and practitioners This second edition of Groundwater Economics accomplishes just that This two volume set is a comprehensive work focused on the economic values of groundwater resources and use and it reinforces the need for a strong economic rationale in decision making relating to that use This new edition includes a new chapter on sustainability as well as updating all chapters with a focus on sustainability It thoroughly explains the economic value of groundwater for sustainable use and needs with practical examples and includes thirteen new and updated case studies on the economics of groundwater data for decision making It also addresses both local and regional groundwater economic choices through a series of applications at an international level This set written by a sustainability professional with decades of experience in managing groundwater use and protection is written for other professionals as well as students who need to understand and evaluate water resources and manage their use from a variety of sustainable approaches Town of Bloomsburg, Columbia County, Flood Damage Reduction Project, Integrated Feasibility Report ,2005 **Floods of the Tiber in Ancient Rome**

Gregory S. Aldrete,2007-03-05 A study of the impact of flooding on the ancient city during the classical period While the remains of its massive aqueducts serve as tangible reminders of Rome s efforts to control its supply of drinking water there are scant physical reminders that other waters sometimes raged out of control In fact floods were simply a part of life in ancient Rome where proximity to the Tiber left a substantial part of the city vulnerable to the river s occasional transgressions Here in the first book length treatment of the impact of floods on an ancient city Gregory S Aldrete draws upon a diverse range of scientific and cultural data to develop a rich and detailed account of flooding in Rome throughout the classical period Aldrete explores in detail the overflowing river s destructive effects drawing from ancient and modern written records and literary accounts analyses of the topography and hydrology of the Tiber drainage basin visible evidence

on surviving structures and the known engineering methods devised to limit the reach of rising water He discusses the strategies the Romans employed to alleviate or prevent flooding their social and religious attitudes toward floods and how the threat of inundation influenced the development of the city s physical and economic landscapes Floods of the Tiber in Ancient Rome is that rare thing in scholarship a work that genuinely fills a gap in the scholarly literature Professor Aldrete has brilliantly illuminated an aspect of ancient Rome that was ever present to the city s inhabitants but almost invisible to modern historians Stanley Burstein history teacher Raises important questions about the effects of flooding of the Tiber on the city of ancient Rome and its inhabitants and explores why Romans did not take more sweeping steps to reduce if not eliminate the dangers of urban flooding There is no comparable book length study of this topic so this work fills a real need It will be of interest not only to students of ancient history but to hydrologists and students of urban studies as well Certainly it will give us classicists much to think about in our assessment of urban life in ancient Rome Harry B Evans Fordham
