Risques Et Catastrophes Observer Spatialiser Comprendre Gerer:

Risques et catastrophes André Dauphiné, Damienne Provitolo, 2013-08-07 Les termes risque et catastrophe d signent une potentialité et une réalité qui ne se recouvrent pas Le risque persistant et tendu dans l'espace se différencie de la catastrophe souvent brève et de formes irrégulières Cet ouvrage entièrement revu vient faire le point sur ces notions complexes La première partie Observer insiste sur les concepts et les nouvelles approches Elle présente la résilience comme un nouveau mode de gestion des risques et efface les distinctions qui séparent le domaine physique du champ social Elle est également consacrée aux représentations et perceptions des risques et catastrophes Dans la deuxième partie Spatialiser les risques et les catastrophes sont examinés différentes échelles celles des zones et des aires de civilisation des milieux littoraux et montagnards et plus encore des villes La troisième partie Comprendre propose des analyses comparatives variées qui permettent de rapprocher des risques perçus comme différents Puis les nouvelles théories générales de la complexité sont invoquées pour comprendre des catastrophes aussi différentes que les séismes les pandémies ou les violences urbaines Ces comparaisons sont enfin privilégiées dans la quatrième partie Gérer qui analyse les politiques de gestion lors des phases de prévention de secours puis de reconstruction en intégrant les mesures les plus récentes au niveau français et européen En conclusion des actions sont proposées pour améliorer le dispositif de lutte contre les catastrophes en France

Territorial Crisis Management Richard Laganier, Yvette Veyret, 2022-10-18 Our societies have become very crisis prone This book explores crises and the methods of anticipation management and reconstruction and considers a risk crisis territorial development continuum The aim is to better understand a widely used concept and clarify the methods of action in the field of crisis management The different forms of learning proposed to better face future crises are also questioned This book invites us to analyze the resources available to support crisis management and reconstruction and consider the unequal access to these resources in different territories in order to design future territorial strategies This often results in a form of territorial inertia after the crises However some innovators imagine renewed territories prepare for reconstruction or even recompose territories now in order to make them more resilient The crisis can then be the driving force or the accelerator of these changes and contribute to the emergence of new practices or even new urban and territorial utopias **Glissement**

The Land/Ocean Interactions in the Coastal Zone of West and Central Africa Salif Diop, Jean-Paul Barousseau, Cyr Descamps, 2014-06-02 Although the main focus of this book is on the estuaries its scope goes well beyond this particular coastal feature Indeed the estuary can only be considered as part of the life cycle of the entire river and the marine area it feeds into an area particularly subject to human and natural pressures The main estuaries and deltas of West and Central Africa region provide a variety of goods and services to its coastal population The most important of them are related to critical fish habitat wood and charcoal from mangroves as well as space for agriculture aquaculture urban development tourism and transport Particular emphasis has been made in this book on mangroves that play a significant role in terms of flood control groundwater replenishment coastline stabilization and protection against storms They also retain sediments and nutrients purify water and provide critical carbon storage Such hydrological and ecological functions explain the focus on serving mangrove ecosystems and the nearby communities which draw significant income

from fishing rice production tourism salt extraction and other activities such as harvesting honey and medicinal plants hence the need for preserving mangrove ecosystems to ensure sustainability of the estuaries and deltas of West and Central Africa region The book has a foreword by Mr Achim Steiner United Nations Under Secretary General and Executive Director of UNEP who is stating that credible and up to date information is essential for the public at large but more specifically for scientists researchers managers decision makers all working together in order to safeguard protect and sustainably manage estuaries deltas and lagoons and the coastal and ocean waters of Western and Central Africa Floods Freddy Vinet, 2017-09-27 In the past thirty years knowledge on flooding has greatly increased by moving away from purely hydrological and hydraulic science and opening up to other disciplines such as economics or human and geographical sciences It is as part of this multidisciplinary approach that this book proposes a review of current knowledge on flood risk It starts with the ever increasing impact of flooding in order to conceptualize and understand the constituents of risk Although risk knowledge in modeling methods or naturalist approaches remains essential it is further developed by the fields of economics human sciences geography environmental psychology and history This integrated approach to flood risk contextualizes current conclusions on the eventual effects of climate change by showing that human factors are of paramount importance in understanding the process of risk production The book sets a state of art around the flood issue from the description of the phenomena to the management of risk dikes dams reducing vulnerability management of crisis The chapters are written by specialists but are accessible to the mainstream scientist Each chapter exposes knowledge methodologies scientific locks and the prospects of each discipline on the theme of floods La géographie : concepts, savoirs et enseignements - 3 éd.
