Аннотация. Рассмотрены проблемы адаптации жителей Белгородской области к пандемической реальности. Обосновано выделение в качестве основных векторов актуальных и потенциальных трансформаций регионального общества в результате комплексного влияния последствий пандемии COVID-19. На основе результатов авторского социологического исследования показано, что влияние пандемии на образ жизни населения довольно значителен, хотя большая часть изменений коснулась преимущественно индивидуальных гигиенических практик. Отмечается явная тенденция к ограничению социальных контактов и социальной жизни – тренд, развитие которого будет зависеть от дальнейшей политики государства. Эмпирически подтверждено несомненное и комплексное влияние пандемии на жизненную ситуацию в большинстве домохозяйств региона. Данное влияние, хотя и проявляется в ряде позитивных эффектов (к числу которых относится, например, рост внимания к собственному здоровью), имеет преимущественно негативное измерение. И если на внутрисемейных коммуникациях оно отражается незначительно, то в гораздо большей степени проявляется в ухудшении качества образования (реализуемого в дистанционном формате) и связанной с этим физической и психологической нагрузкой на членов домохозяйств и, главное, в уменьшении доступности и качества медицинского обслуживания и росте рисков бедности.

Ключевые слова: COVID-19, трансформация регионального общества, самосохранительное поведение, социально-экономические последствия, позитивные и негативные следствия пандемии.

Abstract. The problems of adaptation of residents of the Belgorod region to the pandemic reality are considered. The author substantiates the identification of actual and potential transformations of regional society as the main vectors as a result of the complex impact of the consequences of the COVID-19 pandemic. Based on the results of the author's sociological research, it is shown that the impact of the pandemic on the lifestyle of the population turned out to be quite significant, although most of the changes mainly affected individual hygiene practices. There is a clear tendency to limit social contacts and social life – a trend whose development will depend on the further policy of the state. Here, therefore,
