The 6th International Symposium on Distributed Autonomous Robotic Systems DARS 2002 was held in June 2002 in Fukuoka, Japan, a decade after the first DARS symposium was convened. This book, containing the proceedings of the symposium, provides broad coverage of the technical issues in the current state of the art in distributed autonomous systems composed of multiple robots, robotic modules, or robotic agents. DARS 2002 dealt with new strategies for realizing complex, modular, robust, and fault-tolerant robotic systems, and this volume covers the technical areas of system design, modeling, simulation, operation, sensing, planning, and control. The papers included here were contributed by leading researchers from Asia, Oceania, Europe, and the Americas, and make up an invaluable resource for researchers and students in the field of distributed autonomous robotic systems.

Intelligent Autonomous Robotics Peter Stone, 2022-05-31. Robotics technology has recently advanced to the point of being widely accessible for relatively low-budget research, as well as for graduate, undergraduate, and even secondary and primary school education. This lecture provides an example of how to productively use a cutting-edge advanced robotics platform for education and research by providing a detailed case study with the Sony AIBO robot, a vision-based legged robot. The case study used for this lecture is the UT Austin Villa RoboCup Four Legged Team. This lecture describes both the

development process and the technical details of its end result The main contributions of this lecture are i a roadmap for new classes and research groups interested in intelligent autonomous robotics who are starting from scratch with a new robot and ii documentation of the algorithms behind our own approach on the AIBOs with the goal of making them accessible for use on other vision based and or legged robot platforms
