Robots A 2 Z:

Reasoning Robots Michael Thielscher, 2005-07-05 The creation of intelligent robots is surely one of the most exciting and challenging goals of Artificial Intelligence. A robot is first of all nothing but an inanimate machine with motors and sensors. In order to bring life to it, the machine needs to be programmed so as to make active use of its hardware components. This turns a machine into an autonomous robot. Since about the mid-nineties of the past century, robot programming has made impressive progress. State-of-the-art robots are able to orient themselves and move around freely in indoor environments or negotiate difficult outdoor terrains; they can use stereo vision to recognize objects and they are capable of simple object manipulation with the help of artificial extremities. At a time where robots perform these tasks more and more reliably, we are ready to pursue the next big step, which is to turn autonomous machines into reasoning robots. A reasoning robot exhibits higher cognitive capabilities like following complex and long-term strategies, making rational decisions on a high level, drawing logical conclusions from sensor information acquired over time, devising suitable plans, and reacting sensibly in unexpected situations. All of these capabilities are characteristics of human-like intelligence and ultimately distinguish truly intelligent robots from mere autonomous machines.

Robots A2Z Thomas H. Metos, 1980 Discusses robots, automatons, and other mechanical devices, the earliest of which was developed as part of an Egyptian water clock around 2000 B.C. **Advances in Reconfigurable Mechanisms and Robots II** Xilun Ding, Xianwen Kong, Jian S. Dai, 2015-11-23 This book presents the most recent advances in the research and applications of reconfigurable mechanisms and robots. It collects 93 independently reviewed papers presented at the Third ASME IFTOMM International Conference on Reconfigurable Mechanisms and Robots ReMAR 2015 held in Beijing, China, 20-22 July 2015. The conference papers are organized into seven parts to cover the reconfiguration theory, topology, kinematics, and design of reconfigurable mechanisms, including reconfigurable parallel mechanisms. The most recent results on reconfigurable robots are presented, including their analysis, design, simulation, and control. Bio-inspired mechanisms are also explored in the challenging fields of rehabilitation and minimally invasive surgery. This book further addresses deployable mechanisms and origami-inspired mechanisms and showcases a wide range of successful applications of reconfigurable mechanisms and robots. **Advances in Reconfigurable Mechanisms and Robots II** should be of interest for researchers, engineers, and postgraduate students in mechanical engineering, electrical engineering, computer science, and mathematics.

Holonic and Multi-Agent Systems for Manufacturing Vladimir Marik, Thomas Strasser, Alois Zoitl, 2009-08-25 The research of holonic and agent based systems is developing very rapidly The community around this R D topic is also growing fast despite the fact that the real life practical implementations of such systems are still surprisingly rare However the managers in different branches of industry feel that the holonic and agent based systems represent the only way of managing and controlling very complex highly distributed systems exploring vast volumes of accumulated knowledge The relevant research and development activities gain more and more visible support from both industry as well as public sectors Quite naturally the number of scientific events aimed at the subject field is also growing rapidly We see new lines of conferences like INDIN we observe a strong focus of the already well established conferences e g INCOM or ETFA being shifted toward holonic and agent based manufacturing systems We see an increased interest of the IEEE System Man and Cybernetics Society especially its Technical Committee on Distributed Intelligent Systems which leverages the experience gathered by the members of the former Holonic Manufacturing Systems HMS consortium We see a clear orientation of the

IEEE SMC Transactions part C toward applications of agent oriented solutions The same is true of the International Journal on Autonomous Agents and Multi Agent Systems JAAMAS This is a really good sign of the increasing importance of the field

Textbook of Robotics 2 M. Shoham,2012-12-06 **Flocking and Rendezvous in Distributed Robotics** Bruce A.

Francis,Manfredi Maggiore,2015-10-24 This brief describes the coordinated control of groups of robots using only sensory input and no direct external commands Furthermore each robot employs the same local strategy i e there are no leaders and the text also deals with decentralized control allowing for cases in which no single robot can sense all the others One can get intuition for the problem from the natural world for example flocking birds How do they achieve and maintain their flying formation Recognizing their importance as the most basic coordination tasks for mobile robot networks the brief details flocking and rendezvous They are shown to be physical illustrations of emergent behaviors with global consensus arising from local interactions The authors extend the consideration of these fundamental ideas to describe their operation in flying robots and prompt readers to pursue further research in the field Flocking and Rendezvous in Distributed Robotics will provide graduate students a firm grounding in the subject while also offering an authoritative reference work for more experienced workers seeking a brief but thorough treatment of an area that has rapidly gained in interest
