Role Of Interfaces In Environmental Protection Nato Science Series Iv Earth And Environmental Sciences:

Role of Interfaces in Environmental Protection Sandor Barany, 2012-12-06 The NATO Advanced Research Workshop Role of Interfaces in Environmental Protection has been held on May 27-30 2002 in Miskolc Hungary under leadership of co-directors Prof Sandor Barany from the University of Miskolc Hungary and Prof Nataliya Klymenko National Academy of Sciences of Ukraine The objective of the ARW was to highlight colloidal and biocolloidal aspects of environmental pollution and technologies to monitor remediate abate and prevent pollution It is known that the solution of majority of environmental problems is closely connected with phenomena at the interfaces The behaviour transport of dispersed particles in the environment the main phase separation methods in water treatment purification of liquids aerosols removal many soil remediation processes as well as the methods of protection of human organisms from hazardous matters are based on concepts of colloid chemistry i.e. properties of interfaces and their behaviour in different media Examples of these methods are filtration ultrafiltration flotation coagulation hetero coagulation and flocculation adsorption adhesion of micro organisms to surfaces membrane separation methods etc A very important and special aspect of the topic is the human protection using colloid chemical approaches i.e. the adsorption aggregation and adagulation properties of different materials Examples are adsorption of hazardous organic materials drugs heavy metals and radionuclides on activated carbon silica cellulose derivatives etc

Surface Chemistry in Biomedical and Environmental Science Jonathan P. Blitz, Vladimir M. Gun'ko, 2006-09-09 In September 2005 a NATO Advanced Research Workshop convened in Kiev to discuss the current state of the art in surface chemistry and nanomaterials research with a view towards biomedical and environmental applications This volume represents the fine work presented at this workshop consisting of a unique mixture of reviews as well as primary research articles from leading laboratories in Eastern and Western Europe as well as the US A common theme throughout much of this volume involves adsorption and interfacial behavior of nanomaterials including core shell particles nanoparticles derived from oxides mixed oxides carbon carbon oxide hybrids functionalized nanoparticles polymeric biomaterials and more The behavior and design of these nanomaterials for adsorption or sometimes the lack thereof of toxins pollutants narcotics warfare agents and various biomolecules are studied with a mix of experimental and theoretical approaches This volume holds a special niche in describing the current state of the art in the fundamentals and applications of a variety of nanomaterials

Crystalline Materials for Actinide Immobilisation Boris E. Burakov, Michael I. Ojovan, W. E. Lee, 2011 This book summarises approaches and current practices in actinide immobilisation using chemically durable crystalline materials e.g. ceramics and monocrystals Durable actinide containing materials including crystalline ceramics and single crystals are attractive for various applications such as nuclear fuel to burn excess Pu chemically inert sources of irradiation for use in unmanned space vehicles or producing electricity for microelectronic devices and nuclear waste disposal Long lived emitting actinides such as Pu Np Am and Cm are currently of serious concern has a result of increased worldwide growth in the

nuclear industry Actinide bearing wastes have also accumulated in different countries as a result of nuclear weapons production Excess weapon and civil Pu from commercial spent fuel is waiting for environmentally safe immobilisation As actinides are chemical elements with unique features they could be beneficially used in different areas of human life including medicine although currently there is no appropriate balance between safe actinide disposal and use Both use and disposal of actinides require their immobilisation in a durable host material The choice of an optimal actinide immobilisation route is often a great challenge for specialists There is a wealth of information about actinide properties in many publications although little is published to summarise the currently accepted approaches and practices on actinide immobilisation This book intends to provide such information based on the authors experience and studies in nuclear material management and actinide immobilisation

Colloids for Nano- and Biotechnology Zoltán Hórvölgyi, Eva Kiss, 2008-10-01 This volume contains a selection of the papers presented at the 9th Conference on Colloid Chemistry A colloid chemical approach to nano and biotechnology was one of the main topics of the meeting held in Si fok Hungary in October 2007 It was organized by the Hungarian Chemical Society in cooperation with leading Hungarian universities and the Hungarian Academy of Sciences The contributions demonstrated the progress of the field and supported that The world of neglected dimensions should not be neglected at all in modern material sciences and technologies This volume is intended for professionals dealing with fundamental research or development of industrial applications who encounter colloids nanostructures and interfacial phenomena during their work

Comprehensive Nuclear Materials ,2020-07-22 Materials in a nuclear environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation

Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world

events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field

Annales Universitatis Mariae Curie-Skłodowska ,2006 American Book Publishing Record ,2004 **The British National Bibliography** Arthur James Wells,2009 *Electrochemical Energy Systems* Artur Braun,2018-12-03 This book is for anyone interested in renewable energy for a sustainable future of mankind Batteries fuel cells capacitors electrolyzers and solar cells are explained at the molecular level and at the power plant level in their historical development in their economical and political impact and social change Cases from geophysics and astronomy show that electrochemistry is not confined to the small scale Examples are shown and exercised

Soil Carbon Alfred E. Hartemink,Kevin McSweeney,2014-04-01 Few topics cut across the soil science discipline wider than research on soil carbon This book contains 48 chapters that focus on novel and exciting aspects of soil carbon research from all over the world It includes review papers by global leaders in soil carbon research and the book ends with a list and discussion of global soil carbon research priorities Chapters are loosely grouped in four sections Soil carbon in space and time Soil carbon properties and processes Soil use and carbon management Soil carbon and the environment A wide variety of topics is included soil carbon modelling measurement monitoring microbial dynamics soil carbon management and 12 chapters focus on national or regional soil carbon stock assessments The book provides up to date information for researchers interested in soil carbon in relation to climate change and to researchers that are interested in soil carbon for the maintenance of soil quality and fertility Papers in this book were presented at the IUSS Global Soil C Conference that was held at the University of Wisconsin Madison USA

Comparative Risk Assessment and Environmental Decision Making Igor Linkov,Abou Bakr Ramadan,2006-03-02 Decision making in environmental projects is typically a complex and confusing process characterized by trade offs between socio political environmental and economic impacts Comparative Risk Assessment CRA is a methodology applied to facilitate decision making when various activities compete for limited resources CRA has become an increasingly accepted research tool and has helped to characterize environmental profiles and priorities on the regional and national level CRA may be considered as part of the more general but as yet quite academic field of multi criteria decision analysis MCDA Considerable research in the area of MCDA has made available methods for applying scientific decision theoretical approaches to multi criteria problems but its applications especially in environmental areas are still limited The papers show that the use of comparative risk assessment can provide the scientific basis for environmentally sound and cost efficient policies strategies and solutions

to our environmental challenges *Environmental Software Systems. Frameworks of eEnvironment* Jiri Hrebicek, Gerald Schimak, Ralf Denzer, 2011-06-28 This book constitutes the refereed proceedings of the 9th IFIP WG 5.11 International Symposium on Environmental Software Systems ISESS 2011 held in Brno Czech Republic in June 2011. The 68 revised full papers presented together with four invited talks were carefully reviewed and selected from numerous submissions. The papers are organized in the following topical sections: eEnvironment and cross border services in digital agenda for Europe; environmental information systems and services; infrastructures and platforms; semantics and environment information tools for global environmental assessment; climate services and environmental tools for urban planning and climate change applications and services.

Progressive Engineering Practices in Marine Resource Management Zlateva, Ivelina, Raykov, Violin, Nikolov, Nikola, 2015-04-30 There is overwhelming evidence that marine resources are being overexploited throughout the world. In an effort to conserve the natural resources of the world's oceans, new methods, technologies, and practices in fishery and marine resource management must be implemented. *Progressive Engineering Practices in Marine Resource Management* combines scientific, ecological, and engineering approaches involved in the sustainable management of natural resources. Featuring coverage on key topics relating to environmental management, maritime spatial planning, sustainable fisheries, and waste water treatment, this publication is a critical reference source for fishery associations, scientists, environmental management authorities, and water management directorates interested in emerging technologies and innovative resource management techniques.

Geoethics G. Di Capua, P.T. Bobrowsky, S.W. Kieffer, C. Palinkas, 2021-06-08 This is the second volume focused on geoethics published by the Geological Society of London. This is a significant step forward in which authors address the maturation of geoethics. The field of geoethics is now ready to be introduced outside the geoscience community as a logical platform for global ethics that addresses anthropogenic changes. Geoethics has a distinction in the geoscientific community for discussing ethical, social, and cultural implications of geoscience knowledge, research, practice, education, and communication. This provides a common ground for confronting ideas, experiences, and proposals on how geosciences can supply additional service to society in order to improve the way humans interact responsibly with the Earth system. This book provides new messages to geoscientists, social scientists, intellectuals, law, and decision makers, and laypeople. Motivations and actions for facing global anthropogenic changes and their intense impacts on the planet need to be governed by an ethical framework capable of merging a solid conceptual structure with pragmatic approaches based on geoscientific knowledge. This philosophy defines geoethics.
