Role of the Unsaturated Zone in Radioactive and Hazardous Waste Disposal James W. Mercer, Palakurthi Suresh Chandra Rao, Ira Wendell Marine, 1983 **Role of the Unsaturated Zone in Radioactive and Hazardous Waste Disposal**, 1983 Geological Survey Circular, 1989 **U.S. Geological Survey Water-supply Paper**, 1982 **Selected Water Resources Abstracts**, 1990 **Geologic and Hydrologic Characterization and Evaluation of the Basin and Range Province Relative to the Disposal of High-level Radioactive Waste** Betty M. Miller, Eugene H. Roseboom, M. S. Bedinger, Kenneth A. Sargent, J. E. Reed, 1949 **U.S. Geological Survey Circular**, 1933 Selected Water Resources Abstracts, 1991 *Recharge of Phreatic Aquifers in (Semi-)Arid Areas* Ian Simmers, 2017-10-19 Groundwater use is of fundamental importance to meet the rapidly expanding urban industrial and agricultural water requirements in semi arid areas Quantifying the current rate of groundwater recharge and define its variability in space and time are thus prerequisites for efficient groundwater resource management in these regions where such resources are often the key to economic development Attention focuses on recharge of phreatic aquifers often the most readily available and affordable source of water in semi arid regions These aquifers are also the most susceptible to contamination with the recharge rate determining their level of vulnerability Semi arid zone recharge can be highly variable the greater the aridity the smaller and potentially more variable the natural flux Its determination is an iterative process involving progressive data collection and resource evaluation there is also a need to use more than one technique to verify results Direct localised and indirect recharge mechanisms from a spectrum of known sources are addressed in the framework of recharge from precipitation intermittent flow and permanent water bodies The approach taken for each of these reflects the nature and current understanding of the processes involved The volume also reviews current recharge estimation challenges outlines recent developments and offers guidance for potential solutions **Status of Understanding of the Saturated-zone Ground-water Flow System at Yucca Mountain, Nevada, as of 1995**, 1996 **Flow and Contaminant Transport in Fractured Rock** Jacob Bear, C-F. Tsang, Ghislain De Marsily, 2012-12-02 In the past two or three decades fractured rock domains have received increasing attention not only in reservoir engineering and hydrology but also in connection with geological isolation of radioactive waste Locations in both the saturated and unsaturated zones have been under consideration because such repositories are sources of heat and potential sources of groundwater contamination Thus in addition to the transport of mass of fluid phases in single and multiphase flow the issues of heat transport and mass transport of components have to be addressed *Floods in Kansas and Techniques for Estimating Their Magnitude and Frequency on Unregulated Streams* Ralph W. Clement, 1987 **Water-resources Investigations Report**, 1998 **U.S. Geological Survey Bulletin** Harry Glicken, Jeffrey S. Loen, Michael D. Carr, William Aubrey Cobban, James C.
