*Mapping Mars* Oliver Morton, 2003 A narrative history of the men and women who have explored Mars and mapped its surface from afar and in so doing conditioned our understanding of our nearest planetary neighbour The maps of Mars are exquisitely detailed representations of a land as large as all the continents of the earth combined Yet they are being drawn before any human eye has seen the wonders they contain In this fascinating mix of science travel and the history of scientific imagination Oliver Morton tells the story of the men and women who are mapping a dramatic mysterious landscape without having once set foot on its surface Filled with awe inspiring detail about volcanoes twice the height of Everest basins deeper than the Pacific *Mapping Mars* is a breathtaking account of a world opening up to the imagination *Mapping Mars: Science, Imagination and the Birth of a World (Text Only)* Oliver Morton, 2012-06-28 A narrative history of the men and women who have explored Mars and mapped its surface from afar and in so doing conditioned our understanding of our nearest planetary neighbour *Handbook of Public Communication of Science and Technology* Massimiano Bucchi, Brian Trench, 2008-06-03 Comprehensive yet accessible this key Handbook provides an up to date overview of the fast growing and increasingly important area of public communication of science and technology from both research and practical perspectives As well as introducing the main issues arenas and professional perspectives involved it presents the findings of earlier research and the conclusions previously drawn Unlike most existing books on this topic this unique volume couples an overview of the practical problems faced by practitioners with a thorough review of relevant literature and research The practical Handbook format ensures it is a student friendly resource but its breadth of scope and impressive contributors means that it is also ideal for practitioners and professionals working in the field Combining the contributions of different disciplines media and journalism studies sociology and history of science the perspectives of different geographical and cultural contexts and by selecting key contributions from appropriate and well respected authors this original text provides an interdisciplinary as well as a global approach to public communication of science and technology **Backroom Boys** Francis Spufford, 2010-11-25 A brilliant beautiful account of how British boffins triumphed across the decades in creating everything from computer games to Martian landers The book contains chapters on the Beagle II Elite the 80s computer game the Blue Streak missile Concorde mobile phone technology and the Human Genome Project among others Britain is the only country in the world to have cancelled its space programme just as it put its first rocket into orbit Starting with this forgotten episode *Backroom Boys* tells the bittersweet story of how one country lost its industrial tradition and got back something else Sad inspiring funny and ultimately triumphant it follows the technologists whose work kept Concorde flying created the computer game conquered the mobile phone business saved the human genome for the human race and who now are sending the Beagle 2 probe to burrow in the cinnamon sands of Mars *Backroom Boys* is a vivid love letter to quiet men in pullovers to those whose imaginings take shape not in words but in mild steel and carbon fibre and lines of code Above all it

is a celebration of big dreams achieved with slender means      Exploring the Solar System R. Launius, 2012-12-28 Beginning in the early days of the Space Age well before the advent of manned spaceflight the United States followed soon by other nations undertook an ambitious effort to study the planets of the solar system The remarkable fruits of this research revolutionized the public's view of their celestial neighbors capturing the imaginations of people from all backgrounds like nothing else save the Apollo lunar missions From the first space probes to the most recent planetary rovers they have continually delivered impressive discoveries and reshaped our understanding of the cosmos Offering fascinating investigations into this crucial chapter in space history this collection of specially commissioned essays from leading historians opens new vistas in our understanding of the development of planetary science      *The Planet Remade* Oliver Morton, 2017-05-02 First published in Great Britain by Granta Books 2015      **The Rock From Mars** Kathy Sawyer, 2006-02-14 In this riveting book acclaimed journalist Kathy Sawyer reveals the deepest mysteries of space and some of the most disturbing truths on Earth The Rock from Mars is the story of how two planets and the spheres of politics and science all collided at the end of the twentieth century It began sixteen million years ago An asteroid crashing into Mars sent fragments flying into space and eons later one was pulled by the Earth's gravity onto an icy wilderness near the southern pole There in 1984 a geologist named Roberta Score spotted it launching it on a roundabout path to fame and controversy In its new home at NASA's Johnson Space Center in Houston the rock languished on a shelf for nine years a victim of mistaken identity Then in 1993 the geochemist Donald Duck Mittlefehldt unmasked the rock as a Martian meteorite Before long specialist Chris Romanek detected signs of once living organisms on the meteorite And the obscure rock became a rock star But how did nine respected investigators come to make such startling claims about the rock that they triggered one of the most venomous scientific battles in modern memory The narrative traces the steps that led to this risky move and follows the rippling impact on the scientists' lives the future of space exploration the search for life on Mars and the struggle to understand the origins of life on Earth From the second the story broke in Science magazine in 1996 it spawned waves of excitement envy competitive zeal and calculation In academia in government agencies in laboratories around the world and even in the Oval Office where an inquisitive President Clinton had received the news in secret players of all kinds plotted their next moves Among them David McKay the dynamic geologist associated with the first moon landing who labored to achieve at long last a second success Bill Schopf of UCLA a researcher determined to remain at the top of his field and the first to challenge McKay's claims Dan Goldin the boss of NASA and Dick Morris the controversial presidential adviser who wanted to use the story for Clinton's reelection and unfortunately made sure it ended up in the diary of a 200 an hour call girl Impeccably researched and thrillingly involving Kathy Sawyer's *The Rock from Mars* is an exemplary work of modern nonfiction a vivid account of the all too human high stakes drive to learn our true place in the cosmic scheme      *Physics* Alfred B. Bortz, Fred Bortz, PH.D., 2014-05-14 Contains a history of physics providing definitions and explanations of related
