## **Mapping Small Places Examining Your Environment:**

**Children's Participation** Roger A. Hart, 2013-10-11 People's relationship to nature is the greatest issue facing the world at the turn of the millennium and all over the world young people have shown enormous enthusiasm for environmental action. Many countries are radically reassessing both the role of citizens in managing their environment and the rights and responsibilities of children to be involved in shaping their own and their communities' futures. This book by one of the world's leading authorities on environmental education is written in the conviction that children can play a valuable and lasting role in sustainable development if their participation is taken seriously and planned with thought for their developing capabilities and unique strengths. Through direct participation children can develop a genuine appreciation of democracy and a sense of their own competence and responsibility. The planning, design, monitoring and management of the physical environment is an ideal domain for their participation in part because their commitment to it is so strong. The book is for planners, educationalists and environmentalists introducing the theory and the practice of children's participation and its importance for developing democracy and sustainable communities. It emphasises genuine participation where children are themselves involved in defining problems and acting as reflective critical participants in issues affecting their communities. The environment is interpreted broadly to include for example the planning of housing areas and the management of playgrounds. Detailed case studies are provided from urban and rural poor and middle class communities from both the North and South. For teachers, group facilitators and community leaders it presents organising principles, successful models, practical techniques and resources for involving young people in environmental projects.

Mapping and Analysing Crime Data Alex Hirschfield, Kate Bowers, 2003-09-02 One of the key methods of reducing and dealing with criminal activity is to accurately gauge and then analyse the geographical distribution of crime from small scale to large scale areas. Once the police and government know what areas suffer most from criminal activity they can assess why this is the case and then deal with it in the most effective way. Crime mapping and the spatial analysis of crime data have become recognised as powerful tools for the study and control of crime. Much of the emerging demand for more information and detailed crime pattern analysis have been driven by legislative changes such as the UK's new Crime and Disorder Act which has placed a joint statutory duty on Police Forces and Local Authorities to produce crime and disorder audits for their areas. The book sets out methods used in the fields of Geographical Information Systems and highlights areas of best practice. It examines the types of problems to which spatial crime analysis can be applied, reviews the capabilities and limitations of existing techniques and explores the future directions of spatial crime analysis and the need for training. It centres on a series of case studies highlighting the experiences of academics and practitioners in agencies centrally involved in the partnership approach to crime prevention. Practitioners and academics not only in the UK but also worldwide should be interested in the book as an up to date information resource and a practical guide.
