Kotsireas, Ioannis Tarnanas, 2023-07-25 *The Handbook of Computational Neurodegeneration* provides a comprehensive overview of the field and thus bridges the gap between standard textbooks of research on neurodegeneration and dispersed publications for specialists that have a narrowed focus on computational methods to study this complicated process The handbook reviews the central issues and methodological approaches related to the field for which the reader pursues a thorough overview It also conveys more advanced knowledge thus serving both as an introductory text and as a starting point for an in depth study of a specific area as well as a quick reference source for the expert by reflecting the state of the art and future prospects The book includes topics that are usually missing in standard textbooks and that are only marginally represented in the specific literature The broad scope of this handbook is reflected by five major parts that facilitate an integration of computational concepts methods and applications in the study of neurodegeneration Each part is intended to stand on its own giving an overview of the topic and the most important problems and approaches which are supported by examples practical applications and proposed methodologies The basic concepts and knowledge standard procedures and methods are presented as well as recent advances and new perspectives **Advances in Parkinson's Disease Research: Exploring Biomarkers and Therapeutic Strategies for Halting Disease Progression** Carmen Venegas, Anastasia Bougea, Yildiz Degirmenci, 2025-08-19 Parkinson's disease PD is the fastest growing neurodegenerative disorder being prevalent in 1% of people aged above 65 years PD is characterized by dopaminergic neurons and the accumulation of alpha synuclein syn rich protein in Lewy bodies Although aging is the highest risk factor for developing PD

the genetic predisposition and exposure to environmental factors such as herbicides or pesticides can induce oxidative stress DNA damage and neuronal death contributing to PD pathogenesis To date there is not a therapy to halt the disease Many studies have shown multiple altered pathways offering different approaches for developing an effective therapy however the current therapies are merely symptomatic and they include a substitution of dopamine by the administration of Levodopa the use of catechol O O methyltransferase inhibitors monoamine oxidase inhibitors or Dopamine agonist among others However these treatments can only relieve some of the symptoms they do not slow the progression of the disease and they have limited long term efficacy

SPECT in Dementia Klaus P. Ebmeier, 2003-01-01 Single photon emission computerized tomography SPECT is a relatively cheap and widely available instrument for the examination of brain perfusion cerebral blood flow and activity of neurotransmitter systems The European project SPECT in dementia sets out to overcome some of the factors holding back the development of clinical neuroimaging It has developed a methodology for combining results from different imaging centres at the same time making scan assessment more objective and powerful Moreover using objective voxel based methods of image analysis improves the diagnostic performance of less experienced clinicians and contributes to their training This publication gives an excellent general overview of the new methods of image analysis and sharing It is complemented by a systematic review of the diagnostic utility of SPECT in dementia and a cost effectiveness model of diagnostic improvements in Alzheimers disease This book is essential reading for all scientists economists and clinicians in geriatric medicine neurology and psychiatry neuro radiology and nuclear medicine working with patients suffering from dementia and Alzheimer s disease who want to stay ahead in this rapid developing field

Ronald F. Pfeiffer,Zbigniew K. Wszolek,Manuchair Ebadi,2012-10-09 In recent years considerable advances have been made in our knowledge and understanding of Parkinson s disease PD In particular there has been an explosion of information regarding genetic contributions to the etiology of PD and an increased awareness of the importance of the non motor features of the disease Theories regarding the pathogenesis and pathophysiology of PD have also been refined and new treatment modalities and advances implemented Reflecting these changes this second edition features new chapters devoted to genetic aspects of PD non motor features of the disease and aspects of the pathophysiology pathogenesis and treatment of PD Mild Cognitive Impairment: Influencing Factors and Intervention Effects Ying Wang,Jin-Tai Yu,Xinyi Cao,Guillermo

Felipe,López Sánchez,2024-07-16 As the aging population degree is deepened cognitive impairment has become a globally recognized public health problem As an intermediate state from normal cognition NC to Alzheimer s disease AD mild cognitive impairment MCI has a highly variable cognitive trajectory which contains three outcomes 1 progression to AD and other types of dementia 2 Maintaining stability 3 Reversal to NC Reversal of cognitive function can be achieved by taking positive and effective measures Current studies mostly focus on factors affecting MCI to AD World Health Organization and Alzheimer s Disease International have also proposed relatively mature guidelines for risk factors However there are still some influencing factors that have not yet formed a unified conclusion In addition there are fewer studies and no consensus on the influencing factors for MCI to NC Current forms of intervention for MCI are mainly non pharmacological interventions and there is a lack of randomized controlled trials with larger sample sizes and longer intervention periods to confirm the effect of pharmacological and non pharmacological interventions The purpose of this study is to explore the factors that influence the transition from MCI to AD or NC in aging adults and to examine how the influencing factors make the cognitive function of aging adults with MCI deteriorate improve or even reverse to NC and how are their reversal rates This includes effective measures proven through pharmacological and non pharmacological intervention studies and their impact on reversal Influence factors include but are not limited to demographic factors age socioeconomic status education lifestyle smoking alcohol consumption physical activity nutrition social participation mental health depression loneliness diseases hypertension diabetes sleep disorders biological markers amyloid tau protein and pharmacological factors cholinesterase inhibitor A monoclonal antibodies drugs to rebalance the gut flora etc and submission of research results based on
