 interchangeably and a precise consensus definition of either remains elusive Pharmacogenetics is generally regarded as the
 study of genetic variation that gives rise to differing response to drugs while pharmacogenomics is the broader application of
 genomic technologies to new drug discovery and further characterization of older drugs Pharmacogenetics considers one or
 at most a few genes of interest while pharmacogenomics considers the entire genome Much of current clinical interest is at
 the level of pharmacogenetics involving variation in genes involved in drug metabolism with a particular emphasis on

Immune Regulation in Metabolic Related Diseases Yao Lu,Liang Weng,Xing Li Wang,Ning Hou,2022-11-04 **Combating Fungal Infections** Iqbal Ahmad,Mohammad Owais,Mohammed Shahid,Farrukh Aqil,2010-08-03 Fungi are eukaryotic microorganisms that are closely related to humans at cellular level Human fungal pathogens belong to various classes of fungi mainly zygomycetes ascomycetes basidiomycetes and deuteromycetes In recent years fungal infections have dramatically increased as a result of improved diagnosis high frequency of catheterization instrumentation etc However the main cause remains the increasing number of immunosuppressed patients mostly because of HIV infection and indiscriminate usage of antineoplastic and immunosuppressive agents broad spectrum antibiotics and prosthetic devices and grafts in clinical settings Presently available means of combating fungal infections are still weak and clumsy compared to control of bacterial infection The present scenario of antifungal therapy is still based on two classes of antifungal drugs polyenes and azoles These drugs are effective in many cases but display toxicity and limited spectrum of efficacy The recent trend towards emergence of drug resistant isolates in the clinic is an additional problem In recent years a few new antifungal drugs have entered the clinics but they are expected to undergo same fate as the older antifungal drugs The application of fungal genomics offers an unparalleled opportunity to develop novel antifungal drugs However it is too early to expect any novel drugs as the antifungal drug discovery program is in the stage of infancy Interestingly several novel antifungal drug targets have been identified and validated

Phytonutrients in the Treatment of Gastrointestinal Cancer Haroon Khan,2023-05-02 Gastrointestinal cancer is one of the most prevalent causes of cancer related deaths in the world Recent research demonstrates that phytochemicals are critical in preventing and managing gastrointestinal cancer The increased intake of phytochemicals could reduce the risk of cancer by inhibiting cancer cell proliferation inducing apoptosis and autophagy and suppressing angiogenesis as well as cancer cell metastasis These mechanisms are also known to counter Helicobacter pylori infection and modulate gut

microbiota There is preliminary data suggesting that daily supplementation with high doses of certain vitamins combined with conventional therapeutic agents may enhance their growth inhibitory effects on tumor cells and protect normal tissues against some of their toxic effects This book attempts to fill gaps on the role of phytonutrients in the treatment of cancer in the gastrointestinal tract GIT It discusses the action of individual vitamins on cellular and molecular parameters and describes how vitamins inhibit protein kinase C activity increase the production of certain growth factors and modulate the expression of a number of oncogenes The book is divided into 2 parts The first part summarizes the pathophysiology of GIT cancers and introduces readers to anticancer phytonutrients A chapter on the status of FDA approved nutraceuticals rounds up this section The second part of the book provides a systematic review on the different plant derived chemicals that can be used to treat GIT cancer Each chapter in this section focuses on a specific type of phytochemical agent and its molecular mechanisms relevant to the disease This book will give the reader a holistic view of gastrointestinal cancer treatment and the value of natural compounds in developing functional food and drugs for preventive medicine
