Vascular Surgery: Procedures, Complications and Recovery Vladimir Sihotsky, 2019-11-08 The book Vascular Surgery Procedures Complications and Recovery was written by a team of vascular cardiac and neurosurgeons working mainly in the East Slovak Institute of Cardiovascular Diseases and also Luis Pasteur University Hospital in Kosice Slovakia The book is addressed to students of medicine and also as fundamental principles of vascular surgery for residents in different surgical specializations Vascular surgery has been rapidly developing in recent decades Although the first successful arterial reconstructions appeared the beginning of the 20th century the active management of arterial diseases has developed since the 1950s when new techniques of arterial surgery had been established The first attempts of vascular reconstructions were performed by Alexis Carrel a French surgeon who was awarded the Nobel Prize in Medicine in 1912 for inventing modern vascular suture which is used still today Significant development of vascular surgery brought the introduction of prosthetic grafts by Vorhees in 1952 That enabled De Backey to resect abdominal aortic aneurysm and replace it with synthetic graft in 1955 The first angiography with the catheter was performed by Seldinger in 1952 and Gruntzig in 1974 was the first who did percutaneous transluminal angioplasty and started the modern era of endovascular treatment Since this time an essential development in the treatment of vascular diseases has been observed Nowadays vascular surgeons solve the most severe cases of arterial diseases solve complications of endovascular therapy or are a part of hybrid procedures which are a combination of surgical and endovascular treatment In the first chapter elementary clinical examinations imagine methods and also surgical techniques are described Aortic disorders that are the most severe vascular diseases are analysed in the second third and forth chapters Open aortic surgery is technically the most difficult part of vascular surgery and is associated with the highest mortality Open aortic surgery is now being replaced by endovascular procedures due to lesser invasivity and mortality The fifth chapter is dedicated maily to surgery of carotid arteries Stenosis of the internal carotid artery is one of the reasons for stroke Carotid endarterectomy that removes atherosclerotic plaque from the carotid bifurcations is effective in preventing stroke in patients with stenosis of the internal carotid artery The sixth chapter analyses the problem of surgery of periferal arteries as periferal arterial occlusive disease or acure limnb ischemia Both conditions can lead to major amputations and life long disability The seventh capter analyses vascular trauma that may lead to severe bleeding or limb ischemia both situations require almost immediate diagnosis and treatment Periferal artery trauma is treated mainly by open surgery while the treatment of aortic injury is mostly endovascular Basic types of vascular access and problems of venous disorders are decribed in the eighth chapter Venous diseases are not so life threatening but much more common compared to arterial The last chapter deals with complications and recovery that is inevitable from an excellent surgical outcome

Vascular Anesthesia Procedures Richard Urman, Alan Kaye, 2021 This important manuscript

reviews basic vascular anatomy and physiology The vascular system is part of the cardiovascular system which maintains blood supply to all organs and tissues to upkeep the human metabolic activities Vascular system has three components artery vein and capillaries where oxygen nutrients and metabolites exchange Vascular wall biology has been a very hot topic for the last decades since it is involved in numerous physiological and pathological processes yet many aspects remain unknown There are three layers in the vascular wall Tunica intima Tunica media and Tunica adventitia Adventitia has mainly collagenous and elastic fibers and its physiological function was mostly unknown till recently it is believed to be involved in the pathogenesis of atherosclerosis The vascular tone can be altered by neurohumoral and other factors The brain and the heart and other vital organs have the capability to regulate their blood flow via a phenomenon called autoregulation which maintains relatively constant blood flow to vital organs over a wide range of perfusion pressure c Provided by publisher
