Plasma Science and the Environment Wallace Manheimer, Linda E. Sugiyama, Thomas H. Stix, 1996-11-14 Written by some of the world's foremost experts the articles in this book show how plasma science can be applied to environmental problems including atmospheric sensing and modification energy conservation reduction of air pollution and processing of ordinary and radioactive wastes Atmospheric CFC's might be zapped with big lasers Urban air pollution could be removed by large convection towers built in or near cities And weapons grade plutonium can be destroyed with specially designed particle accelerators Some of the technologies described here are in use already while others are in the prototype stage or are speculative approaches deserving of further study Contents Written by some of the world's foremost experts the articles in this book show how plasma science can be applied to environmental problems including atmospheric sensing and modification energy conservation reduction of air pollution and processing of ordinary and radioactive wastes Atmospheric CFC's might be zapped with big lasers Urban air pollution could be removed by large convection towers built in or near cities And weapons grade plutonium can be destroyed with specially designed particle accelerators Some of the technologies described here are in use already while others are in the prototype stage or are speculative approaches deserving of further study

Introduction to Applied Optimization Urmila Diwekar, 2008-12-03 Optimization has pervaded all spheres of human endeavor Although optimization has been practiced in some form or other from the early prehistoric era this area has seen progressive growth during the last few decades Modern society lives not only in an environment of intense competition but is also constrained to plan its growth in a sustainable manner with due concern for conservation of resources Thus it has become imperative to plan design operate and manage resources and assets in an optimal manner Early approaches have been to optimize individual activities in a standalone manner however the current trend is towards an integrated approach integrating thesis and design design and control production planning scheduling and control The functioning of a system may be governed by multiple performance objectives Optimization of such systems will call for special strategies for handling the multiple objectives to provide solutions closer to the systems requirement Uncertainty and variability are two issues which render optimal decision making difficult Optimization under uncertainty would become increasingly important if one is to get the best out of a system plagued by uncertain components These issues have thrown up a large number of challenging

optimization problems which need to be resolved with a set of existing and newly evolving optimization tools Optimization theory had evolved initially to provide generic solutions to optimization problems in linear nonlinear unconstrained and constrained domains These optimization problems were often called mathematical programming problems with two distinctive classifications namely linear and nonlinear programming problems Proceedings of the International Topical Meeting on Nuclear and Hazardous Waste Management, Spectrum ... ,1996 Proceedings of the International Topical Meeting on Nuclear and Hazardous Waste Management--Spectrum '96 ,1996 Introduction to Applied Optimization Urmila M.
