Perfumes, Cosmetics and Soaps William Arthur Poucher, G. M. Howard, 1974 During the past decade there have been many changes in the perfumery industry which are not so much due to the discovery and application of new raw materials but rather to the astronomic increase in the cost of labour required to produce them This is reflected more particularly in the flower industry where the cost of collecting the blossoms delivered to the factories has gone up year after year so much so that most flowers with the possible exception of Mimosa have reached a cost price which has compelled the perfumer to either reduce his purchases of absolutes and concretes or alternatively to substitute them from a cheaper source or even to discontinue their use This development raises an important and almost insoluble problem for the perfumer who is faced with the necessity of trying to keep unchanged the bouquet of his fragrances and moreover to ensure no loss of strength and diffusiveness Of course this problem applies more especially to the adjustment of formulae for established perfumes because in every new creation the present high cost of raw materials receives imperative consideration before the formula is approved
