Selected Papers, Including the Book L'Analysis Situs Solomon Lefschetz, 1971 *Selected Papers With Commentary, Of Tony Hilton Royle Skyrme* Gerald E Brown, 1994-04-20 The most important papers of Tony Hilton Royle Skyrme are collected in this volume which also includes commentaries by G Brown and other articles relating to the life and work of Tony Skyrme R Dalitz E Witten and others Skyrme's work was brilliant profound and surprisingly useful He provided an original solution to the problem of constructing fermions from bosons formulating the topological soliton model of the nucleon His two parameter model of effective interactions in nuclei has yielded a remarkably accurate description of nuclear structure His particle model of nuclei gave deep insights into the structure of important and complicated excited states This volume is a unique collection of Tony Skyrme's work It is a must for all physicists in the high energy nuclear and mathematical physics community

Selected Papers Shiing-Shen Chern, 1978 In recognition of professor Shiing Shen Chern's long and distinguished service to mathematics and to the University of California the geometers at Berkeley held an International Symposium in Global Analysis and Global Geometry in his honor in June 1979 The output of this Symposium was published in a series of three separate volumes comprising approximately a third of Professor Chern's total publications up to 1979 Later a fourth volume was published focusing on papers written during the Eighties This second volume comprises selected papers written between 1932 and 1965 *Handbook of the History of General Topology* C.E. Aull, R. Lowen, 2013-03-09 This book is the first one of a work in several volumes treating the history of the development of topology The work contains papers which can be classified into 4 main areas Thus there are contributions dealing with the life and work of individual topologists with specific schools of topology with research in topology in various countries and with the development of topology in different periods The work is not restricted to topology in the strictest sense but also deals with applications and generalisations in a broad sense Thus it also treats e.g. categorical topology interactions with functional analysis convergence spaces and uniform spaces Written by specialists in the field it contains a wealth of information which is not available anywhere else

Mathematician And His Mathematical Work, A: Selected Papers Of S S Chern Shiu-yuen Cheng, Shiing-shen Chern, P Li, Gang Tian, 1996-09-07 This volume is about the life and work of Shiing Shen Chern 1911 one of the leading mathematicians of this century The book contains personal accounts by some friends together with a summary of the mathematical works by Chern himself Besides a selection of the mathematical papers the book also contains all his papers published after 1988 **Selected Papers** Marston Morse, 1981-05-04 From the Introduction Marston Morse was born in 1892 so that he was 33 years old when in 1925 his paper Relations between the critical points of a real valued function of n independent variables appeared in the Transactions of the American Mathematical Society Thus Morse grew to maturity just at the time when the subject of Analysis Situs was being shaped by such masters as Poincaré Veblen L E J Brouwer G D Birkhoff Lefschetz and Alexander and it was Morse's genius and destiny to discover one of the most beautiful and far

reaching relations between this fledgling and Analysis a relation which is now known as Morse Theory In retrospect all great ideas take on a certain simplicity and inevitability partly because they shape the whole subsequent development of the subject And so to us today Morse Theory seems natural and inevitable This whole flight of ideas was of course acclaimed by the mathematical World it eventually earned him practically every honor of the mathematical community over twenty honorary degrees the National Science Medal the Legion of Honor of France *An Application of Analysis Situs to Statistics* Harold Hotelling,1927 **On Two-dimensional Analysis Situs** Dudley Weldon Woodard,Edward Yoder,John Thomas Salter,Mary H. Young,1928 Selected Pre-critical Writings and Correspondence with Beck Immanuel Kant,1968 Includes letters from Kant to M Herz J S Beck and others **Basic Algebraic Geometry 2** Igor R. Shafarevich,2012-11-27 The second volume of Shafarevich s introductory book on algebraic varieties and complex manifolds As with Volume 1 the author has revised the text and added new material e g as a section on real algebraic curves Although the material is more advanced than in Volume 1 the algebraic apparatus is kept to a minimum making the book accessible to non specialists It can be read independently of Volume 1 and is suitable for beginning graduate students in mathematics as well as those in theoretical physics **Catalogue of the Library** American Mathematical Society,1925 Curves in Non-metrical Analysis Situs Nels Johann Lennes,1911 Catalog of the Library American Mathematical Society,1925 *University of Pennsylvania Bulletin* University of Pennsylvania,1928 Selected Works of Phillip A. Griffiths with Commentary Phillip Griffiths,2003 Containing four parts such as Analytic Geometry Algebraic Geometry Variations of Hodge Structures and Differential Systems that are organized according to the subject matter this title provides the reader with a panoramic view of important and exciting mathematics during the second half of the 20th century The Scientific Legacy of Poincare Éric Charpentier,Etienne Ghys,Annick Lesne,2010 Henri Poincare 1854 1912 was one of the greatest scientists of his time perhaps the last one to have mastered and expanded almost all areas in mathematics and theoretical physics He created new mathematical branches such as algebraic topology dynamical systems and automorphic functions and he opened the way to complex analysis with several variables and to the modern approach to asymptotic expansions He revolutionized celestial mechanics discovering deterministic chaos In physics he is one of the fathers of special relativity and his work in the philosophy of sciences is illuminating For this book about twenty world experts were asked to present one part of Poincare s extraordinary work Each chapter treats one theme presenting Poincare s approach and achievements along with examples of recent applications and some current prospects Their contributions emphasize the power and modernity of the work of Poincare an inexhaustible source of inspiration for researchers as illustrated by the Fields Medal awarded in 2006 to Grigori perelman for his proof of the Poincare conjecture stated a century before This book can be read by anyone with a master s even a bachelor s degree in mathematics or physics or more generally by anyone who likes mathematical and physical ideas Rather than presenting detailed proofs the main ideas are explained and a bibliography is provided for those who wish to understand the technical

Luogeng Hua, 1983 From the Preface by H Halberstam The unexpected arrival of Loo Keng Hua in Europe in the fall of 1978 was for many of us a romantic event a legend come to life What had long been and had seemed destined to remain merely a revered name in the mathematical annals of our times assumed suddenly the handsome presence of the man himself dignified yet jovial youthful yet wise serene yet ever questing for new achievements and we realized how very much we had missed by his thirty years absence from the international scene While the publication of theses Selecta from his writings needs no justification beyond what is in them it will I hope serve also as a way of saying a most cordial welcome back It has been an honor for me to play a small role in producing the Selecta To select only parts from the imposing whole is automatically to be wrong and it may well seem in the long run to quote loosely from a poem of Hua himself that I have repaid gifts in jade with artifacts of wood **A History of Algebraic and Differential Topology, 1900 - 1960** Jean Dieudonné, 2009-09-01 This book is a well informed and detailed analysis of the problems and development of algebraic topology from Poincaré and Brouwer to Serre Adams and Thom The author has examined each significant paper along this route and describes the steps and strategy of its proofs and its relation to other work Previously the history of the many technical developments of 20th century mathematics had seemed to present insuperable obstacles to scholarship This book demonstrates in the case of topology how these obstacles can be overcome with enlightening results Within its chosen boundaries the coverage of this book is superb Read it MathSciNet
