Selected Papers On Analysis And Differential Equations:

Selected Papers on Analysis and Differential Equations □□□□, 2003 This volume contains translations of papers that originally appeared in the Japanese journal Sugaku Ordinarily the papers would appear in the AMS translation of that journal but to expedite publication the Society has chosen to publish them as a volume of selected papers The papers range over a variety of topics including nonlinear partial differential equations C algebras and Schrodinger operators The volume is suitable for graduate students and research mathematicians interested in analysis and differential equations Selected Papers on Differential Equations and Analysis ,2005 Contains translations of papers that originally appeared in the Japanese journal Sugaku This book covers a variety of topics including differential equations with free boundary singular integral operators and operator algebras It is suitable for graduate students and research mathematicians interested in analysis and differential equations **Selected Papers on Analysis and Differential Equations** ,2010 Selected papers on analysis and differential equations Katsumi Nomizu, 2003 This volume contains translations of papers that originally appeared in the Japanese journal Sugaku The papers range over a variety of topics including nonlinear partial differential equations C algebras and Schr dinger operators **Selected Papers on Analysis and Differential Equations** American Mathematical Society, 2010 This volume contains translations of papers that originally appeared in the Japanese journal Sugaku These papers range over a variety of topics in ordinary and partial differential equations and in analysis Many of them are survey papers presenting new results obtained in the last few years This volume is suitable for graduate students and research mathematicians interested in analysis and differential equations This volume contains translations of papers that originally appeared in the Japanese journal Sugaku These papers range over a variety of topics in ordinary and partial differential equations and in analysis Many of them are survey papers presenting new results obtained in the last few years This volume is suitable for graduate students and research mathematicians interested in analysis and differential equations **Selected Papers of F.W.J. Sattinger, Gian-Carlo Rota, 1997-12-18 The deep and original ideas of Norman Levinson have had a lasting impact on fields as diverse as differential integral equations harmonic complex stochastic analysis and analytic number theory during more than half a century Yet the extent of his contributions has not always been fully recognized in the mathematics community For example the horseshoe mapping constructed by Stephen Smale in 1960 played a central role in the development of the modern theory of dynamical systems and chaos The horseshoe map was directly stimulated by Levinson's research on forced periodic oscillations of the Van der Pol oscillator and specifically by his seminal work initiated by Cartwright and Littlewood In other topics Levinson provided the foundation for a rigorous theory of singularly perturbed differential equations He also made fundamental contributions to inverse scattering theory by showing the connection between scattering data and spectral data thus relating the famous Gel'fand Levitan method to the inverse scattering problem for the Schrodinger equation He was the first to analyze and make explicit use of wave functions now widely known as the Jost functions Near the end of his life Levinson returned to research in analytic number theory and made profound progress on the resolution of the Riemann Hypothesis Levinson's papers are typically tightly crafted and masterpieces of brevity and clarity It is our hope that the publication of these selected papers will bring his mathematical ideas to the attention of the larger mathematical community
