Selection Methods In Plant Breeding:

Selection Methods in Plant Breeding Izak Bos, Peter Caligari, 2013-11-21 Our requirement for plant breeders to be successful has never been greater. However, one views the forecasted numbers for future population growth we will need in the immediate future to be feeding, clothing and housing many more people than we do inadequately at present. Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive. Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is known to humans. It was practised by people who first started to carry out a settled form of agriculture. The art as it must have been at that stage was applied without any formal underlying framework but achieved dramatic results as witnessed by the forms of cultivated plants we have today. We are now learning how to apply successfully the results of yet imperfect scientific knowledge. This knowledge is however rapidly developing particularly in areas of tissue culture, biotechnology and molecular biology. Plant breeding's inherent multifaceted nature means that alongside obvious subject areas like genetics we also need to consider areas such as statistics, physiology, plant pathology, entomology, biochemistry, weed science, quality seed characteristics, reproductive biology, trial design, selection and computing.

Selection Methods in Plant Breeding Izak Bos, Peter Caligari, 2007-10-26 Selection procedures used in plant breeding have gradually developed over a very long time span in fact since settled agriculture was first undertaken. Nowadays these procedures range from very simple mass selection methods sometimes applied in an ineffective way to indirect trait selection based on molecular markers. The procedures differ in costs as well as in genetic efficiency. In contrast to the genetic efficiency costs depend on the local conditions encountered by the breeder. The genetic progress per unit of money invested varies consequently from site to site. This book considers consequently only the genetic efficiency, i.e. the rate of progress to be expected when applying a certain selection procedure. If a breeder has a certain breeding goal in mind a selection procedure should be chosen. A wise choice requires a well-founded opinion about the response to be expected from any procedure that might be applied. Such an opinion should preferably be based on the most appropriate model when considering the crop and the trait or traits to be improved. Sometimes little knowledge is available about the genetic control of expression of the traits. This applies particularly in the case of quantitative variation in the traits. It is therefore important to be familiar with methods for the elucidation of the inheritance of the traits of interest. This means in fact that the breeder should be able to develop population genetic and quantitative genetic models that describe the observed mode of inheritance as satisfactorily as possible.

Selection Methods in Plant Breeding T. Kramer, 1984* **PLANT BREEDING METHODS** MAHABAL RAM, 2014-10-01 This comprehensive book provides a detailed account of the plant breeding methodology covering particularly pre and post Green Revolution era. It elaborates on plant breeding and gene manipulation, utilization of self-incompatibility in developing hybrids, different plant breeding methods for development of crop varieties and hybrids in self and cross-pollinated crops, nature of gene action and

genotype environment interaction The text discusses gene manipulation in the crop plant and transfer of genes from wild species to cultivated crops application of biotechnology in plant breeding and genetic engineering and transgenic molecular markers as breeding tools and their limitations It concludes with a discussion on physiologic breeding approach and new plant ideotype concepts which are new and emerging areas of interest in plant breeding research The book will be of immense use to undergraduate and postgraduate students of Agricultural Sciences and Botany for their course study Besides research scholars and professionals will also find the book as an excellent source of reference
