*Semantic Theories in Europe, 1830-1930* Brigitte Nerlich,1992-03-26 It is widely believed by historians of linguistics that the 19th century was largely devoted to historical and comparative studies with the main emphasis on the discovery of soundlaws Syntax is typically portrayed as a mere sideline of these studies while semantics is seldom even mentioned If it comes into view at all it is usually assumed to have been confined to diachronic lexical semantics and the construction of some mostly ill conceived typologies of semantic change This book aims to destroy some of these prejudices and to show that in Europe semantics was an important although controversial area at that time Synchronic mechanisms of semantic change were discovered and increasing attention was paid to the context of the sentence to the speech situation and the users of the language From being a semantics of transformations a child of the biological geological paradigm of historical linguistics with its close links to etymology and lexicography the field matured into a semantics of comprehension and communication set within a general linguistics and closely related to the emerging fields of psychology and sociology Prof. Jun Yeh, Tallinn University of Technology, Estonia,2014-07-07 amount of new knowledge every day We have to acknowledge that even the smartest people among us are incapable of familiarizing himself with all these new data Fortunately we are only required to deal with a very small amount of that vast number in our work and life As those who devote himself to the field of information technology and management engineering I sincerely believe that it is our responsibility to make efforts to accelerate the advance of science in such fields The 2014 international Conference on Information Technology and Management Engineering thanks to the hard work of its committee will be held on April 26 and 27 in Hong Kong The ITME2014 covers a wide range of topics such as network protocols information theory and coding theory network security management theory project management public management knowledge management etc It is a great honor to us that

numerous people from various countries including many famous experts and excellent researchers have shown their interest in this convention and submitted their latest studies to us as their support Among these studies we have selected about a hundred to be finally included in this proceeding after reviewing and discussing We believe that this collection of work will be of great value not only to the participants of ITME2014 but also to those who has a chance of meeting it The publication of this conference proceedings and the successful opening of ITME2014 owe its credit to a lot of people and institutions especially the ITME2014 committee the editors and DEStech Publications The committee has devoted much time to reviewing the papers submitted to ITME2014 and DEStech Publications publishing those accepted papers I would like to thank the committee and the press deeply here for their support to ITME2014 and I am eagerly looking forward to another chance for us to be a team again Finally let s wish together that the 2014 International Conference on Information Technology

**Cultural Interpretation** Brian K. Blount, 2004-07-09 Building on insights into the social functions of language especially its interpersonal dimensions Blount constructs a culturally sensitive model of interpretation that provides a sound basis for ethnographic and popular as well as historical critical readings of the biblical text Blount's framework does more than acknowledge the inevitability of multiple interpretations it foment them His analysis demonstrates the social intent of every reading and shows the influence of communicative context in such diverse readings of the Bible as Rudolf Bultmann's the peasants of Solentiname the Negro spirituals and black church sermons Then Blount turns to Mark's account of the trial of Jesus where he shows how this hermeneutical scheme helps to assess the emergence and validity of multiple readings of the text and the figure of Jesus

**On the Mathematics of Modelling, Metamodelling, Ontologies and Modelling Languages** Brian Henderson-Sellers, 2012-06-13 Computing as a discipline is maturing rapidly However with maturity often comes a plethora of subdisciplines which as time progresses can become isolationist The subdisciplines of modelling metamodelling ontologies and modelling languages within software engineering e.g. have to some degree evolved separately and without any underpinning formalisms Introducing set theory as a consistent underlying formalism Brian Henderson Sellers shows how a coherent framework can be developed that clearly links these four previously separate areas of software engineering In particular he shows how the incorporation of a foundational ontology can be beneficial in resolving a number of controversial issues in conceptual modelling especially with regard to the perceived differences between linguistic metamodelling and ontological metamodelling An explicit consideration of domain specific modelling languages is also included in his mathematical analysis of models metamodels ontologies and modelling languages This encompassing and detailed presentation of the state of the art in modelling approaches mainly aims at researchers in academia and industry They will find the principled discussion of the various subdisciplines extremely useful and they may exploit the unifying approach as a starting point for future research
