The Shape of Things Shawn W. Walker,2015-12-17 Many things around us have properties that depend on their shape for example the drag characteristics of a rigid body in a flow This self contained overview of differential geometry explains how to differentiate a function in the calculus sense with respect to a shape variable This approach which is useful for understanding mathematical models containing geometric partial differential equations PDEs allows readers to obtain formulas for geometric quantities such as curvature that are clearer than those usually offered in differential geometry texts Readers will learn how to compute sensitivities with respect to geometry by developing basic calculus tools on surfaces and combining them with the calculus of variations Several applications that utilize shape derivatives and many illustrations that help build intuition are included

The Gongsun Longzi and Other Neglected Texts Rafael Suter,Lisa Indraccolo,Wolfgang Behr,2020-04-06 The Gongsun Longzi is often considered the only extant work of the Classical Chinese School of Names an early intellectual tradition trad dated to the 4th cent B C mainly concerned with logic and the philosophy of language The Gongsun Longzi is a heterogeneous collection of five chapters that include short treatises and largely fictive dialogues between an anonymous persuader and his opponent which typically revolve around a paradoxical claim Its value as a testimony to Early Chinese philosophy however is somewhat controversial due to the intricate textual history of the text and our limited knowledge about its intellectual backgrounds This volume

gathers contributions by leading specialists in the fields of Classical Chinese philosophy philology logic and linguistics Besides an overview of the scholarly literature on the topic and a detailed account of the reception of the text throughout time it presents fresh insights into philological and philosophical problems raised by the Gongsun Longzi and other closely related texts equally attributed to the School of Names

Leibniz Robert Merrihew Adams, 1998-11-12 Legendary since his own time as a universal genius Gottfried Wilhelm Leibniz 1646 1716 contributed significantly to almost every branch of learning from mathematics to ecumenical theology But the part of his work that is most studied today is probably his writings in metaphysics which have been the focus of particularly lively philosophical discussion in the last twenty years or so Leibniz's writings in metaphysics contain one of the great classic systems of modern philosophy but the system must be pieced together from a vast and miscellaneous array of manuscripts letters articles and books in a way that makes especially strenuous demands on scholarship This book presents an in depth interpretation of three important parts of Leibniz's metaphysics thoroughly grounded in the texts as well as in philosophical analysis and critique The three areas discussed are the metaphysical part of Leibniz's philosophy of logic his essentially theological treatment of the central issues of ontology and his theory of substance the theory of monads

The Geometry of Christian Contemplation David Albertson, 2025-05-16 The writings of ancient and medieval Christian mystics were rediscovered in the twentieth century and today they are read more widely than ever before But do modern assumptions about religious experience influence how we hear those premodern voices Do we do them justice by thinking of mysticism as interior and ineffable Or can mystical experience intersect with the natural environment and indeed the cosmos which science calculates with precise quantities David Albertson's *The Geometry of Christian Contemplation* Measure without Measure suggests a fresh approach to the history of mystical theology that is oriented toward exteriority more than interiority and toward the measurable world outside more than the invisible world within The ancient Greek philosopher Plotinus had taught contemplatives to close their eyes and withdraw into the soul Most Christians followed his directions but others dissented In three critical episodes an alternative model of Christian contemplation began to emerge from Dionysius the Areopagite to the Byzantine monks John of Damascus and Theodore the Studite to eccentric humanists in medieval Paris Together these episodes add up to a very different theological aesthetics one that can enliven the modern study of mysticism and correct some of its imbalances For in the

centuries before the scientific revolution and the secularization of nature Christians still saw God in the exterior world not only the interior soul God was not an ineffable and formless Absolute immeasurable as the soul but an infinite Measure who leaves behind geometrical traces in the figures of the world The God who became a human body in the Incarnation not only entered time and matter but also spatial extension and with it the conditions of measure points lines curves shapes planes dimensions and magnitudes Today the wisdom of this counter tradition can strengthen the study of mysticism not only by supplementing our contemporary fascination with negative theology by redefining what it means to name God positively but by suggesting a new connection between Christian mysticism and the hyper measured hyper technologized world that surrounds us
