*Theory of Electric and Magnetic Orientation in Sharks and Rays Revisited* Adrianus J. Kalmijn, 2024-08-15 The book describes the theory of electromagnetic orientation in sharks and rays The theory evolved from studying the publications of Faraday von Arx and Longuett Higgins Sharks and rays can detect the earth's magnetic field as well as the ambient electric fields utilizing their electrosensory system the Ampullae of Lorenzini Dr Kalmijn provides the physical description of this sensory system in the context of his previously published behavioral studies performed in the laboratory and in natural open ocean settings The book lays bare the physics bedrock of the motional electric fields The physics of the entire sensory environment interacting with these very sensitive organs is made clear step by step so the reader can understand the source of the fields and how the animals detect them Dr Kalmijn analyzes the sensory organs from the perspective of the animal moving through these electric and magnetic fields to arrive at the appropriate relativistic frame to understand how the sensory system works Relying on his thorough understanding of Maxwell Faraday and Einstein he has sought to understand the miraculous abilities
