Simulation of Sheet Metal Forming Processes Marta C. Oliveira,José Valdemar Fernandes,2020-04-22 The numerical
simulation of sheet metal forming processes has become an indispensable tool for the design of components and their

components in industries ranging from automotive to packing as well as enabling an improved understanding of the
deformation mechanisms and their interaction with process parameters Despite being a consolidated tool its potential for
application continues to be discovered with the continuous need to simulate more complex processes including the
integration of the various processes involved in the production of a sheet metal component and the analysis of in service
behavior The quest for more robust and sustainable processes has also changed its deterministic character into stochastic to
be able to consider the scatter in mechanical properties induced by previous manufacturing processes Faced with these
challenges this Special Issue presents scientific advances in the development of numerical tools that improve the prediction
