Tsimring, 2006-11-22 This book provides a summary of the research conducted at UCLA Stanford University and UCSD over the last ve years in the area of nonlinear dyn ics and chaos as applied to digital communications At rst blush the term chaotic communications seems like an oxymoron how could something as precise and deterministic as digital communications be chaotic But as this book will demonstrate the application of chaos and nonlinear dynamicstocommunicationsprovidesmanypromisingnewdirectionsinareas of coding nonlinear optical communications and ultra wideband commu cations The eleven chapters of the book summarize many of the promising new approaches that have been developed and point the way to new research directions in this eld Digital communications techniques have been continuously developed and re ned for the past fty years to the point where today they form the heart of a multi hundred billion dollar per year industry employing hundreds of thousands of people on a worldwide basis There is a continuing need for transmission and reception of digital signals at higher and higher data rates There are a variety of physical limits that place an upper limit on these data rates and so the question naturally arises are there alternative communi tion techniques that can overcome some of these limitations Most digital communications today is carried out using electronic devices that are essentially linear and linear system theory has been used to c tinually re ne their performance In many cases inherently nonlinear devices are linearized in order to achieve a certain level of linear system performance **Point Sources of Pollution: Local Effects and their Control - Volume II** Qian Yi, 2009-08-17 Point Sources of Pollution Local Effects and their Control is a component of Encyclopedia of Environmental and Ecological Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Point sources of pollution are the major causes of degradation of ecosystems and may have significant effects on human health if they are not properly controlled They can be classified in terms of sources the discharged media and the pollutants themselves Broadly speaking the sources include municipal and industrial sector activities and the media include water air and solids Noise is also an important form of pollution Pollutant compositions from point sources can be vast varied and complex and can vary between different countries and regions The Theme discusses matters of great relevance to our world such as Vehicular Emissions Industrial Pollution Domestic Pollution Environmental Pollutants and Their Control Technologies for Air Pollution Control and Technologies for Water Pollution Control These two volumes are aimed at the following five major target audiences University and College students Educators
