

Exhaustive search

- ▶ The exhaustive search method can be used to solve problems where the interval in which the optimum is known to lie is finite.
- ▶ Let x_l and x_r denote, respectively, the starting and final points of the interval of uncertainty.
- ▶ The exhaustive search method consists of evaluating the objective function at a predetermined number of equally spaced points in the interval (x_l, x_r) , and reducing the interval of uncertainty using the assumption of unimodality.

Bounded Rationality in Decision Making Under Uncertainty: Towards Optimal Granularity Joe Lorkowski, Vladik Kreinovich, 2017-07-01 This book addresses an intriguing question are our decisions rational It explains seemingly irrational human decision making behavior by taking into account our limited ability to process information It also shows with several examples that optimization under granularity restriction leads to observed human decision making Drawing on the Nobel prize winning studies by Kahneman and Tversky researchers have found many examples of seemingly irrational decisions e g we overestimate the probability of rare events Our explanation is that since human abilities to process information are limited we operate not with the exact values of relevant quantities but with granules that contain these values We show that optimization under such granularity indeed leads to observed human behavior In particular for the first time we explain the mysterious empirical dependence of betting odds on actual probabilities This book can be recommended to all students interested in human decision making to researchers whose work involves human decisions and to practitioners who design and employ systems involving human decision making so that they can better utilize our ability to make decisions under uncertainty

Accelerating MATLAB Performance Yair M. Altman, 2014-12-11 The MATLAB programming environment is often

perceived as a platform suitable for prototyping and modeling but not for serious applications One of the main complaints is that MATLAB is just too slow Accelerating MATLAB Performance aims to correct this perception by describing multiple ways to greatly improve MATLAB program speed Packed with the *Reducing Planning Problems by Path Reduction* Ulrich Scholz, 2004 Planning is among the characteristic features of intelligence and therefore it is a central research topic of Intellectics since its beginning Although planning is a very hard task recent planning systems have achieved an astonishing performance and are applied in various fields One reason for the success of these systems lies among others in the exploitation of structural properties that are present in many but not all problems The use of such structural properties therefore leads to a specialization on a class of problems Their exploitation is often conducted by a preprocessing step i e by the application of a special algorithm prior to the search for a plan This work identifies and examines the class of c invariants as such a structural property of planning problems c Invariants are state invariants and are present in many problems of practical interest Building on the features of c invariants the dissertation presents path reduction a preprocessing technique that can significantly simplify planning problems Finally the work describes an implementation of path reduction and examines its application Optimization Methods for Engineering Design Mr. Rohit Manglik, 2023-06-23 Studies optimization techniques for improving engineering design focusing on cost performance and resource efficiency

Optimization Problems in Self-Organizing Networks

Steffen Wolf, 2010 Modern computer networks or wireless ad hoc networks offer a wide range of interesting optimization problems Usual optimization goals are the minimization of the message delay in a Peer to Peer system or the minimization of the energy consumption of a wireless network This thesis presents different kinds of algorithms to solve such optimization problems Starting from the mathematical formulations for these problems various global view optimization algorithms are presented These algorithms are based on evolutionary algorithms and local search or similar heuristics They can be used to quickly find near optimal solutions if a global view of the network is possible As the participants in a computer network or a wireless ad hoc network are autonomous nodes distributed algorithms can be designed that enable these nodes to collectively solve the optimization problem Four distributed algorithms are formulated and evaluated in this thesis thus laying grounds for distributed optimization of networks Using these algorithms the network can be modelled as a self optimizing network and the optimization problem can be approached without global view
