Modern Dynamical Systems and Applications Michael Brin, Boris Hasselblatt, Ya. B. Pesin, 2004-08-16

This volume presents a wide cross section of current research in the theory of dynamical systems and contains articles by leading researchers including several Fields medalists in a variety of specialties. These are surveys usually with new results included as well as research papers that are included because of their potentially high impact. Major areas covered include hyperbolic dynamics elliptic dynamics mechanics geometry ergodic theory group actions rigidity applications. The target audience includes dynamicists who will find new results in their own specialty as well as surveys in others and mathematicians from other disciplines who look for a sample of current developments in ergodic theory and dynamical systems.

Real And Complex Singularities - Proceedings Of The Australian-japanese Workshop (With Cd-rom) Laurentiu

Paunescu, Adam Harris, Satoshi Koike, Toshizumi Fukui, 2007-01-30. The modern theory of singularities provides a unifying theme that runs through fields of mathematics as diverse as homological algebra and Hamiltonian systems. It is also an important point of reference in the development of a large part of contemporary algebra geometry and analysis. Presented by internationally recognized experts, the collection of articles in this volume yields a significant cross section of these developments. The wide range of surveys includes an authoritative treatment of the deformation theory of isolated complex singularities by prize winning researcher K. Miyajima. Graduate students and even ambitious undergraduates in mathematics will find many research ideas in this volume and non experts in mathematics can have an overview of some classic and fundamental results in singularity theory. The explanations are detailed enough to capture the interest of the curious reader and complete enough to provide the necessary background material needed to go further into the subject and explore the research literature.

Proceedings of the Sixth Berkeley Symposium on Mathematical Statistics and Probability, Volume III Lucien M. Le Cam, Jerzy Neyman, Elizabeth L. Scott, 2024-04-05. This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact. Drawing on a backlist dating to 1893, Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology. This title was originally published in 1972.

Harvard Lectures of Alfred North Whitehead Paul Bogaard, 2017-03-21 Presents Whitehead's lectures at Harvard during the 1924-5 academic year the first philosophy lectures he ever gave Beginning in September of 1924 Alfred North Whitehead presented a regular course of 85 lectures which concluded in May of 1925 These represent the first ever philosophy lectures he gave and capture him working out the philosophical implications of the remarkable turns physics had taken in his lifetime This volume finally recreates these lectures by transcribing notes by W P Bell W E Hocking and Louise Heath taken at the time many of which have only recently been discovered and including hundreds of sketches of Whitehead's blackboard diagrams This is a unique insight into the evolution of Whitehead's thought during the months when he was drafting his seminal work Science and the Modern World Includes transcriptions of the lecture notes a chronology over 300 line drawings of Whitehead's blackboard sketches a bibliography of referenced works and an index to the lectures Gives an

overview of the content of the 85 lectures Clarifies how these lectures represent Whiteheads philosophical insights Describes the circumstances that preserved the three sets of notes Yang-baxter Equations In Paris - Proceedings Of The Conference Jean-marie Maillard,1993-10-04 *Resolution of Singularities* Herwig Hauser,Joseph Lipman,Frans Oort,Adolfo Quirós,2000-02-14 In September 1997 the Working Week on Resolution of Singularities was held at Obergurgl in the Tyrolean Alps Its objective was to manifest the state of the art in the field and to formulate major questions for future research The four courses given during this week were written up by the speakers and make up part I of this volume They are complemented in part II by fifteen selected contributions on specific topics and resolution theories The volume is intended to provide a broad and accessible introduction to resolution of singularities leading the reader directly to concrete research problems **Super-Resolution Imaging** Peyman Milanfar,2017-12-19 With the exponential increase in computing power and broad proliferation of digital cameras super resolution imaging is poised to become the next killer app The growing interest in this technology has manifested itself in an explosion of literature on the subject Super Resolution Imaging consolidates key recent research contributions from eminent scholars and practitioners in this area and serves as a starting point for exploration into the state of the art in the field It describes the latest in both theoretical and practical aspects of direct relevance to academia and industry providing a base of understanding for future progress Features downloadable tools to supplement material found in the book Recent advances in camera sensor technology have led to an increasingly larger number of pixels being crammed into ever smaller spaces This has resulted in an overall decline in the visual quality of recorded content necessitating improvement of images through the use of post processing Providing a snapshot of the cutting edge in super resolution imaging this book focuses on methods and techniques to improve images and video beyond the capabilities of the sensors that acquired them It covers History and future directions of super resolution imaging Locally adaptive processing methods versus globally optimal methods Modern techniques for motion estimation How to integrate robustness Bayesian statistical approaches Learning based methods Applications in remote sensing and medicine Practical implementations and commercial products based on super resolution The book concludes by concentrating on multidisciplinary applications of super resolution for a variety of fields It covers a wide range of super resolution imaging implementation techniques including variational feature based multi channel learning based locally adaptive and nonparametric methods This versatile book can be used as the basis for short courses for engineers and scientists or as part of graduate level courses in image processing **Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry** Vlastimil Dlab,Claus Michael Ringel,2004 These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups

and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry
