Chandrasekharam,2014-03-07 In the region comprising Turkey and Greece people have been using water from geothermal sources for bathing and washing of clothes since ancient times This region falls within the Alpine Himalayan orogenic belt and hence is a locus of active volcanism and tectonism and experiences frequent seismic events This volcanic and tectonic activity has given rise to over 1500 geothermal springs Its importance was recognized decades ago and the geothermal water is now being utilized for district heating industrial processing domestic water supply balneology and electric power generation The geothermal potential in this region is large In Turkey alone it is estimated to be more than 31500 MWt while the proven potential is 4078 MWt At present 2084 MWt is being utilized for direct applications in Turkey and 135 MWt in Greece In Turkey electricity is produced for 166 MW installed capacity whereas in Greece geothermal energy is presently not used for electricity production despite its potential This book discusses the geochemical evolution of the thermal waters and thermal gases in terms of the current volcano tectonic setting and associated geological framework that makes the region very important to the geothermal scientific community The book explains in a didactic way the possible applications depending on local conditions and scales and it presents new and stimulating ideas for future developments of this renewable energy source Additionally the book discusses the role s of possible physicochemical processes in deep hydrothermal systems the volatile provenance and relative contributions of mantle and crustal components to total volatile inventories It provides the reader with a thorough understanding of the geothermal systems of this region and identifies the most suitable solutions for specific tasks and needs elsewhere in the world It is the first time that abundant information and data from this region obtained from intensive research during the last few decades is unveiled to the international geothermal community Thus an international readership in the professional and academic sectors as well as in key institutions that deal with geothermal energy will benefit from the knowledge from geothermal research and experiences obtained from the Aegean Region

Groundwater Modelling in Arid and Semi-Arid Areas Howard

S. Wheeler, Simon A. Mathias, Xin Li, 2010-09-09 Arid and semi arid regions face major challenges in the management of scarce freshwater resources under pressures of population economic development climate change pollution and over abstraction Groundwater is commonly the most important water resource in these areas Groundwater models are widely used globally to understand groundwater systems and to guide decisions on management However the hydrology of arid and semi arid areas is very different from that of humid regions and there is little guidance on the special challenges of groundwater modelling for these areas This book brings together the experience of internationally leading experts to fill a gap in the scientific and technical literature It introduces state of the art methods for modelling groundwater resources illustrated with a wide ranging set of illustrative examples from around the world The book is valuable for researchers practitioners in developed and developing countries and graduate students in hydrology hydrogeology water resources management environmental engineering and geography
