Groups and Symmetries John P. Harnad, Pavel Winternitz, **Moonshine, the Monster, and Related Topics** Chongying Dong, Geoffrey Mason, 1996 This is the proceedings of a Joint Summer Research Conference held at Mount Holyoke College in Jun 1994 As perhaps the first conference proceedings devoted exclusively to the subject known as Moonshine this work contains something for many mathematicians and physicists Many of the results featured are not available elsewhere **Moonshine beyond the Monster** Terry Gannon, 2023-07-27 A monograph on Moonshine a mathematical physics topic for graduate students and researchers **Introduction to Vertex Operator Algebras and Their Representations** James Lepowsky, Haisheng Li, 2012-12-06 Introduces the fundamental theory of vertex operator algebras and its basic techniques and examples Begins with a detailed presentation of the theoretical foundations and proceeds to a range of applications Includes a number of new original results and brings fresh perspective to important works of many other researchers in algebra Lie theory representation theory string theory quantum field theory and other areas of math and physics **Proceedings on Moonshine and Related Topics**, 2001 This volume contains the proceedings of the Moonshine workshop held at the Centre de Recherches Mathématiques CRM in Montréal A glance at the contents will reveal that the connection of some papers to Moonshine is not immediate however Moonshine has proved to be a very fertile area and it does not stretch the imagination to believe that many more threads will be drawn together before we understand what is really going on In this volume all the classical Moonshine themes are presented namely the Monster simple group and other finite groups automorphic functions and forms and related c **Isomonodromic Deformations and Applications in Physics** John P. Harnad, Alexander R. Its, 2002 The area of inverse scattering transform method or soliton theory has evolved over the past two decades in a vast variety of exciting new algebraic and analytic directions and has found numerous new applications Methods and applications range from quantum group theory and exactly solvable statistical models to random matrices random permutations and number theory The theory of isomonodromic deformations of systems of differential equations with rational coefficients and most notably the related apparatus of the Riemann Hilbert problem underlie the analytic side of this striking development The contributions in this volume are based on lectures given by leading experts at the CRM workshop Montreal Canada Included are both survey articles and more detailed expositions relating to the theory of isomonodromic deformations the Riemann Hilbert problem and modern applications The first part of the book represents the mathematical aspects of isomonodromic deformations the second part deals mostly with the various appearances of isomonodromic deformations and Riemann Hilbert methods in the theory of exactly solvable quantum field theory and statistical mechanical models and related issues The book elucidates for the first time in the current literature the important role that isomonodromic deformations play in the theory of integrable systems and their applications to physics **Recent Advances in Differential Geometry and Related Areas** Bogdan D. Suceavă, Adara M.

Blaga, Marian Ioan Munteanu, Cezar Oniciuc, Shoo Seto, Gabriel-Eduard Vălcu, Lihan Wang, 2025-06-24 This volume contains the proceedings of the AMS Special Session on Recent Advances in Differential Geometry held virtually on April 12 2023 and the Tenth Congress of Romanian Mathematicians Special Session on Recent Advances in the Geometry of Submanifolds held on June 30 July 5 2023 in Pitești Romania In the last two decades various techniques produced new results in differential geometry and many of them focused on the geometry of submanifolds where one of the most important questions the Willmore conjecture was solved in 2012 by A Neves and F Coda Marques This invites a reflection on the new trends and research directions that contemporary differential geometry might and will take in its natural development Some of the most important advances have been obtained by using techniques in geometric analysis while others have been using more classical methods which are still of interest Motivated by these new developments the present volume intends to bring together various viewpoints on the recent study of representing the fundamental idea of space in differential geometry Of particular interest are the results focused on minimal submanifolds and their generalizations and the related concept of harmonic mappings and their generalizations In preparing this volume the editors were particularly interested in the study of curvature functionals in various contexts from comparison geometry to new curvature invariants relations between curvature and topology as well as other related topics

Superintegrability in Classical and Quantum Systems P. Tempesta, P. Winternitz, J. Harnad, W. Miller, Jr., G. Pogosyan, and M. Rodriguez, Superintegrable systems are integrable systems classical and quantum that have more integrals of motion than degrees of freedom Such systems have many interesting properties This title is based on the Workshop on Superintegrability in Classical and Quantum Systems organized by the Centre de Recherches Mathématiques in Montreal Quebec

Frontiers in Number Theory, Physics, and Geometry II

Pierre E. Cartier, Bernard Julia, Pierre Moussa, Pierre Vanhove, 2007-07-18 Ten years after a 1989 meeting of number theorists and physicists at the Centre de Physique des Houches a second event focused on the broader interface of number theory geometry and physics This book is the first of two volumes resulting from that meeting Broken into three parts it covers Conformal Field Theories Discrete Groups and Renormalization offering extended versions of the lecture courses and shorter texts on special topics

Superintegrability in Classical and Quantum Systems Piergiulio Tempesta, 2004 Superintegrable systems are integrable systems classical and quantum that have more integrals of motion than degrees of freedom Such systems have many interesting properties This title is based on the Workshop on Superintegrability in Classical and Quantum Systems organized by the Centre de Recherches Mathématiques in Montreal Quebec

Singularities in PDE and the Calculus of Variations Stanley Alama, Lia Bronsard, Peter J. Sternberg, This book contains papers presented at the

Workshop on Singularities in PDE and the Calculus of Variations at the CRM in July 2006 The main theme of the meeting was the formation of geometrical singularities in PDE problems with a variational formulation These equations typically arise in some applications to physics engineering or biology for example and their resolution often requires a combination of methods

coming from areas such as functional and harmonic analysis differential geometry and geometric measure theory Among the PDE problems discussed were the Cahn Hilliard model of phase transitions and domain walls vortices in Ginzburg Landau type models for superconductivity and superfluidity the Ohno Kawasaki model for diblock copolymers models of image enhancement and Monge Ampere functions The articles give a sampling of problems and methods in this diverse area of mathematics which touches a large part of modern mathematics and its applications

Group Theory and Numerical Analysis Pavel Winternitz, The Workshop on Group Theory and Numerical Analysis brought together scientists working in several different but related areas The unifying theme was the application of group theory and geometrical methods to the solution of differential and difference equations The emphasis was on the combination of analytical and numerical methods and also the use of symbolic computation This meeting was organized under the auspices of the Centre de Recherches Mathematiques Universite de Montreal Canada This volume has the character of a monograph and should represent a useful reference book for scientists working in this highly topical field

Invariant Theory in All Characteristics Harold Edward Alexander Eddy Campbell, David L. Wehlau, This volume includes the proceedings of a workshop on Invariant Theory held at Queen's University Ontario The workshop was part of the theme year held under the auspices of the Centre de recherches mathematiques CRM in Montreal The gathering brought together two communities of researchers those working in characteristic 0 and those working in positive characteristic The book contains three types of papers survey articles providing introductions to computational invariant theory modular invariant theory of finite groups and the invariant theory of Lie groups expository works recounting recent research in these three areas and beyond and open problems of current interest The book is suitable for graduate students and researchers working in invariant theory

Complex Analysis and Potential Theory Andre Boivin, Javad Mashreghi, 2012 This is the proceedings volume of an international conference entitled Complex Analysis and Potential Theory which was held to honor the important contributions of two influential analysts Kohur N GowriSankaran and Paul M Gauthier in June 2011 at the Centre de Recherches Mathematiques CRM in Montreal More than fifty mathematicians from fifteen countries participated in the conference The twenty four surveys and research articles contained in this book are based on the lectures given by some of the most established specialists in the fields They reflect the wide breadth of research interests of the two honorees from potential theory on trees to approximation on Riemann surfaces from universality to inner and outer functions and the disc algebra from branching processes to harmonic extension and capacities from harmonic mappings and the Harnack principle to integration formulae in $\mathbb{C}^n$ and the Hartogs phenomenon from fine harmonicity and plurisubharmonic functions to the binomial identity and the Riemann hypothesis and more This volume will be a valuable resource for specialists young researchers and graduate students from both fields complex analysis and potential theory It will foster further cooperation and the exchange of ideas and techniques to find new research perspectives

Calabi-Yau Varieties: Arithmetic, Geometry and Physics Radu Laza, Matthias Schütt, Noriko

Yui,2015-08-27 This volume presents a lively introduction to the rapidly developing and vast research areas surrounding Calabi Yau varieties and string theory With its coverage of the various perspectives of a wide area of topics such as Hodge theory Gross Siebert program moduli problems toric approach and arithmetic aspects the book gives a comprehensive overview of the current streams of mathematical research in the area The contributions in this book are based on lectures that took place during workshops with the following thematic titles Modular Forms Around String Theory Enumerative Geometry and Calabi Yau Varieties Physics Around Mirror Symmetry Hodge Theory in String Theory The book is ideal for graduate students and researchers learning about Calabi Yau varieties as well as physics students and string theorists who wish to learn the mathematics behind these varieties **Analysis and Geometry of Metric Measure Spaces** Galia Devora Dafni,Robert John McCann,Alina Stancu,2013 This book contains lecture notes from most of the courses presented at the 50th anniversary edition of the Seminaire de Mathematiques Superieure in Montreal This 2011 summer school was devoted to the analysis and geometry of metric measure spaces and featured much interplay between this subject and the emergent topic of optimal transportation In recent decades metric measure spaces have emerged as a fruitful source of mathematical questions in their own right and as indispensable tools for addressing classical problems in geometry topology dynamical systems and partial differential equations The summer school was designed to lead young scientists to the research frontier concerning the analysis and geometry of metric measure spaces by exposing them to a series of minicourses featuring leading researchers who highlighted both the state of the art and some of the exciting challenges which remain This volume attempts to capture the excitement of the summer school itself presenting the reader with glimpses into this active area of research and its connections with other branches of contemporary mathematics Hilbert Spaces of Analytic Functions Javad Mashreghi,Thomas Ransford,Kristian Seip,2010-01-01 Research Directions in Number Theory Alina Bucur,Wei Ho,Renate Scheidler,2024-06-26 This is the fifth proceedings volume published under the Women in Numbers umbrella The WIN workshops and their proceedings volumes are part of the WIN network aimed at highlighting the research of women and gender minorities in number theory as well as increasing their participation and boosting their potential collaborations in number theory and related fields The volume contains research articles in the mathematical area of number theory written by teams of scholars at all levels in the field More information about the network its goals and purpose past and future conferences and past proceedings volumes can be found on the WIN website This volume contains research outcomes and results produced by the collaborative research groups created under the Women in Numbers V workshop the 5th in its series The actual workshop was to take place in 2020 at the Banff International Research Station in Banff Canada but could not take place onsite due to COVID The associated research groups each consisting of 1 2 leaders and 2 4 junior researchers were formed nevertheless and their collaborations went ahead in purely virtual form as well as other papers by author teams for which at least 50% of the authors identify as women or gender minorities These contributions include original research

and survey articles in a wide variety of subareas within number theory. The former present new cutting edge research that will be of interest to experts in the field to the benefit of their own research. The survey articles serve as an accessible introduction for graduate students and other readers to areas of number theory that may be outside their area of expertise.

Recent Developments in Lie Algebras, Groups and Representation Theory Kailash C. Misra, Daniel Ken

Nakano, Brian Parshall, 2012. This book contains the proceedings of the 2009–2011 Southeastern Lie Theory Workshop Series held October 9–11, 2009 at North Carolina State University; May 22–24, 2010 at the University of Georgia; and June 1–4, 2011 at the University of Virginia. Some of the articles written by experts in the field survey recent developments, while others include new results in Lie algebras, quantum groups, finite groups, and algebraic groups. *Calabi-Yau Varieties and Mirror Symmetry* Noriko Yui, James Dominic Lewis. The idea of mirror symmetry originated in physics, but in recent years the field of mirror symmetry has exploded onto the mathematical scene. It has inspired many new developments in algebraic and arithmetic geometry, toric geometry, the theory of Riemann surfaces, and infinite dimensional Lie algebras, among others. The developments in physics stimulated the interest of mathematicians in Calabi-Yau varieties. This led to the realization that the time is ripe for mathematicians, armed with many concrete examples and alerted by the mirror symmetry phenomenon, to focus on Calabi-Yau varieties and to test for these special varieties some of the great outstanding conjectures, e.g., the modularity conjecture for Calabi-Yau threefolds defined over the rationals, the Bloch-Beilinson conjectures, regulator maps of higher algebraic cycles, Picard-Fuchs differential equations, GKZ hypergeometric systems, and others. The articles in this volume report on current developments. The papers are divided roughly into two categories: geometric methods and arithmetic methods. One of the significant outcomes of the workshop is that we are finally beginning to understand the mirror symmetry phenomenon from the arithmetic point of view, namely in terms of zeta functions and L-series of mirror pairs of Calabi-Yau threefolds. The book is suitable for researchers interested in mirror symmetry and string theory.
