S Dreaming And The Development Of Consciousness:

Children's Dreaming and the Development of Consciousness David Foulkes, 2009-07-01 David Foulkes is one of the international leaders in the empirical study of children's dreaming and a pioneer of sleep laboratory research with children. In this book which distills a lifetime of study Foulkes shows that dreaming as we normally understand it active stories in which the dreamer is an actor appears relatively late in childhood. This true dreaming begins between the ages of 7 and 9. He argues that this late development of dreaming suggests an equally late development of waking reflective self awareness. Foulkes offers a spirited defense of the independence of the psychological realm and the legitimacy of studying it without either psychoanalytic over interpretation or neurophysiological reductionism. Harris' Developmental Neuropsychiatry James C. Harris, Joseph T. Coyle, 2024 Harris' Developmental Neuropsychiatry provides updated information to the first edition which defined the field of developmental neuropsychiatry and is the most recent comprehensive textbook in the field.

The Oxford Companion to Consciousness Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges. How does the brain's activity result in the rich phenomenology that characterizes our waking life? Are animals conscious? Why did consciousness evolve? How does science proceed to answer such questions? Can we define what consciousness is? Can we measure it? Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia, delirium, or altered states of consciousness? These questions are at the heart of contemporary research in the domain. Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness. In this light the Oxford Companion to Consciousness is the most complete authoritative survey of contemporary research on consciousness. Five years in the making and including over 250 concise entries written by leaders in the field, the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain. Structured as an easy to use dictionary and extensively cross referenced, the Companion offers contributions from philosophy of mind to neuroscience, from experimental psychology to clinical findings, so reflecting the profoundly interdisciplinary nature of the domain. Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness. The result is a unique compendium that will prove indispensable to anyone interested in consciousness, from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best characterization of a particular phenomenon. *The Science and Art of Dreaming* Mark Blagrove, Julia Lockheart, 2023-02-10 The Science and Art of Dreaming is an innovative text that reviews the neuroscience and psychology of how dreams are produced, how they are recalled, and their relationship to waking life events and concerns.

Dream Consciousness Nicholas Tranquillo, 2014-09-01 This book presents three lectures by Allan Hobson entitled The William James Lectures on Dream Consciousness The three lectures expose the new psychology the new physiology and the new philosophy that derive from and support the protoconsciousness hypothesis of dreaming They review in detail many of the studies on sleep and dreaming conducted since the days of Sigmund Freud Following the lectures are commentaries written by scholars whose expertise covers a wide range of scientific disciplines including but not limited to philosophy psychology neurology neuropsychology cognitive science biology and animal sciences The commentaries each

answer a specific question in relation to Hobson's lectures and his premise that dreaming is an altered state of consciousness. Capitalizing on a vast amount of data, the lectures and commentaries provide undisputed evidence that sleep consists of a well-organized sequence of subtly orchestrated brain states that undoubtedly play a crucial function in the maintenance of normal brain functions. These functions include both basic homeostatic processes necessary to keep the organism alive as well as the highest cognitive functions including perception, decision making, learning, and consciousness.

Sleep and Dreaming Edward F. Pace-Schott, 2003-02-27

How and why does the sleeping brain generate dreams? Though the question is old, a paradigm shift is now occurring in the science of sleep and dreaming that is making room for new answers. From brainstem-based models of sleep cycle control, research is moving toward combined brainstem-forebrain models of sleep cognition itself. The book presents five papers by leading scientists at the center of the current firmament and more than seventy-five commentaries on those papers by nearly all of the other leading authorities in the field. Topics include mechanisms of dreaming and REM sleep, memory consolidation in REM sleep, and an evolutionary hypothesis of the function of dreaming. The papers and commentaries, together with the authors' rejoinders, represent a huge leap forward in our understanding of the sleeping and dreaming brain. The book's multidisciplinary perspective will appeal to students and researchers in neuroscience, cognitive science, and psychology.
