**Selected Papers of Chia-Shun Yih** Chia-Shun Yih, 1991      **Selected Papers By Chia-shun Yih (In 2 Volumes)** W M Lai, Sung P Lin, 1991-05-30 The volume represents a lifetime's work of the author for many years the Stephen P Timoshenko Distinguished University Professor of Fluid Mechanics of the University of Michigan The papers selected treat the dynamics of stratified or rotating fluids internal or surface waves hydrodynamic stability jets and plumes flow in porous media and certain aspects of hydrodynamics in magnetic or electric fields When the papers are viewed in perspective heterogeneity whether in density entropy circulation viscosity or in some quantity which can be called magnetic circulation seems to be a recurring theme in the phenomena investigated It provides a general framework through which the understanding of the various phenomena is facilitated by the satisfying similarity underlying their seeming diversity      Memorial Tributes National Academy of Engineering, 2002-07-11 This is the 10th Volume in the series Memorial Tributes compiled by the National Academy of Engineering as a personal remembrance of the lives and outstanding achievements of its members and foreign associates These volumes are intended to stand as an enduring record of the many contributions of engineers and engineering to the benefit of humankind In most cases the authors of the tributes are contemporaries or colleagues who had personal knowledge of the interests and the engineering accomplishments of the deceased Through its members and foreign associates the Academy carries out the responsibilities for which it was established in 1964 Under the charter of the National Academy of Sciences the National Academy of Engineering was formed as a parallel organization of outstanding engineers Members are elected on the basis of significant contributions to engineering theory and practice and to the literature of engineering or on the basis of demonstrated unusual accomplishments in the pioneering of new and developing fields of technology The National Academies share a responsibility to advise the federal government on matters of science and technology The expertise and credibility that the National Academy of Engineering brings to that task stem directly from the abilities interests and achievements of our members and foreign associates our colleagues and friends whose special gifts we remember in this book      **Fluid Dynamics at Interfaces** Wei Shyy, Ranga Narayanan, 1999-09-28 Many of the significant issues in fluid dynamics occur at interfaces that is at the boundaries between differing fluids or between fluids and solids These issues are important in areas ranging from aircraft flight to the flow of blood in the heart to chemical vapour deposition The subject is an area of active research and development owing to improved analytical experimental and computational techniques This book describes research and applications in interfacial fluid dynamics and stability It is organized around five topics Benard and thermocapillary instabilities shear and pressure induced instabilities waves and dispersions multiphase systems and complex flows Chapters have been contributed by internationally recognized experts both theoreticians and experimentalists Because of the range and importance of topics discussed this book will interest a broad audience of graduate students and researchers in mechanical aerospace materials and chemical engineering as well as

**Applications** Santanu Manna,Biswa Nath Datta,Sk. Safique Ahmad,2020-02-14 This book contains original research papers  
presented at the International Conference on Mathematical Modelling and Scientific Computing held at the Indian Institute  
of Technology Indore India on 19-21 July 2018 Organized into 30 chapters the book presents the recent progress and the  
most advanced innovations trends and real world challenges encountered and solutions embraced in the applications of  
mathematics and scientific computing The book will be of interests to a wide variety of researchers students and the  
practicing engineers working in diverse areas of science and engineering ranging from applied and computational  
mathematics vibration problem computer science and numerical optimization to physics chemistry biology electrical civil  
mechanical chemical seismology aerospace and medical sciences The aim of the conference is to bring together leading  
academicians scientists researchers engineers and industry partners from all over the globe to exchange and share their  
experiences and research results on various aspects of applied mathematics and scientific computation like differential

Moshagen,2024-08-07 This book presents a generalized version of the classical Kelvin Helmholtz instability a useful tool  
which allows for new approaches when studying stability problems in fluid mechanics as well as its important applications It  
begins by providing an introduction to hydrodynamic stability and the Kelvin Helmholtz KH instability The author then  
develops the general KH stability model for a multi layer flow system which includes the conventional KH instability as a  
special case This book also includes the detailed discussion of two important applications of this model the generation of  
sand waves in alluvial channels and the generation of wind waves on water Additionally the effects of nonlinearities and the  
use of computational methods to study KH instability are included This book serves as a concise and modern treatment of the  
KH stability model with specific attention paid to hydrodynamic stability analysis It is ideal for graduate students interested  
in fluid dynamics as well as scientists and engineers in the fields of oceanography geophysics offshore engineering and more
