Selected Papers on Subwavelength Diffractive Optics Joseph Neil Mait, Joseph N. Mait, Dennis W. Prather, 2001 SPIE Milestones are collections of seminal papers from the world literature covering important discoveries and developments in optics and photonics

Diffractive Optics Donald C. O'Shea, 2004 This book provides the reader with the broad range of materials that were discussed in a series of short courses presented at Georgia Tech on the design fabrication and testing of diffractive optical elements DOEs Although there are not long derivations or detailed methods for specific engineering calculations the reader should be familiar and comfortable with basic computational techniques This text is not a cookbook for producing DOEs but it should provide readers with sufficient information to assess whether this technology would benefit their work and to understand the requirements for using the concepts and techniques presented by the authors

Extreme Photonics & Applications Trevor Hall, Sergey V. Gaponenko, 2009-11-24 Extreme Photonics Applications arises from the 2008 NATO Advanced Study Institute in Laser Control Monitoring in New Materials Biomedicine Environment Security and Defense Leading experts in the manipulation of light offered by recent advances in laser physics and nanoscience were invited to give lectures in their fields of expertise and participate in discussions on current research applications and new directions The sum of their contributions to this book is a primer for the state of scientific knowledge and the issues within the subject of photonics taken to the extreme frontiers molding light at the ultra finest scales which represents the beginning of the end to limitations in optical science for the benefit of 21st Century technological societies Laser light is an exquisite tool for physical and chemical research Physicists have recently developed pulsed lasers with such short durations that one laser shot takes the time of one molecular vibration or one electron rotation in an atom which makes it possible to observe their internal electronic structure thereby enabling the study of physical processes and new chemical reactions In parallel advances in micro and nano structured photonic materials allow the precise manipulation of light on its natural scale of a wavelength Photonic crystals plasmons and related metamaterials composed of subwavelength nanostructures permit the manipulation of their dispersive properties and have allowed the experimental confirmation of bizarre new effects such as slow light and negative refraction These advances open a vista on a new era in which it is possible to build lasers and engineer materials to control and use photons as precisely as it is already possible to do with electrons <http://www.photonics.uottawa.ca/nato/asi/2008>

Handbook of Silicon Photonics Laurent Vivien, Lorenzo Pavesi, 2016-04-19 The development of integrated silicon photonic circuits has recently been driven by the Internet and the push for high bandwidth as well as the need to reduce power dissipation induced by high data rate signal transmission To reach these goals efficient passive and active silicon photonic devices including waveguide modulators photodetectors
