**Buried Glory** Istvan Hargittai, 2013-09-19 Moscow's Novodevichy Cemetery is the final resting place of some of Russia's most celebrated figures from Khrushchev and Yeltsin to Anton Chekhov Sergei Eisenstein Nikolai Gogol and Mikhail Bulgakov Using this famed cemetery as symbolic starting point *Buried Glory* profiles a dozen eminent Soviet scientists nine of whom are buried at Novodevichy men who illustrate both the glorious heights of Soviet research as well as the eclipse of science since the collapse of the USSR Drawing on extensive archival research and his own personal memories renowned chemist Istvan Hargittai brings these figures back to life placing their remarkable scientific achievements against the tense political backdrop of the Cold War Among the eminent scientists profiled here are Petr L Kapitza one of the most brilliant representatives of the great generation of Soviet physicists a Nobel Prize winner who risked his career and his life standing up for fellow scientists against Stalin Yulii B Khariton who ran the highly secretive Soviet nuclear weapons laboratory Arzamas 16 despite being Jewish and despite the fact that his father Boris had been sent to the labor camps And Andrei D Sakharov the father of the Soviet hydrogen bomb and a brilliant fighter for human rights for which he won the Nobel Peace Prize Along the way Hargittai shines a light on the harrowing conditions under which these brilliant researchers excelled Indeed in the post war period Stalin's anti-Semitism and ongoing anti-science measures devastated biology damaged chemistry and nearly destroyed physics The latter was saved only because Stalin realized that without physics and physicists there could be no nuclear weapons The extraordinary scientific talent nurtured by the Soviet regime belongs almost entirely to the past *Buried Glory* is both a fitting tribute to these great scientists and a fascinating account of scientific work behind the Iron Curtain

Science In Moscow: Memorials Of A Research Empire Istvan Hargittai, Magdolna Hargittai, 2019-08-20 The statuary and monuments catalogued in this impressive body of work are accompanied by descriptions of the subjects their work and achievements Chemistry World Moscow is the center of science and higher education of Russia and is also an international hub of science There have been milestone achievements of science in Russia and the Soviet Union especially in the areas of physics chemistry mathematics the conquest of space various technologies and medicine However the scientists and inventors often created in isolation and have become less known than their discoveries would justify At the same time there is no other city in the world that has so many memorials honoring scientists as Moscow There is a caveat in that political considerations have often influenced who was remembered and who was not This book presents statues memorial

plaques and historical buildings Not only celebrated excellences are mentioned but also some of the greats that perished during the years of terror The book is full of human drama and 750 photos illustrate the narrative Science in Moscow follows Budapest Scientific and New York Scientific and is the third in the series about memorials of scientists in great cities of the world

*Lumen Naturae* Matilde Marcolli,2020-05-26 Exploring common themes in modern art mathematics and science including the concept of space the notion of randomness and the shape of the cosmos This is a book about art and a book about mathematics and physics In *Lumen Naturae* the title refers to a purely immanent non supernatural form of enlightenment mathematical physicist Matilde Marcolli explores common themes in modern art and modern science the concept of space the notion of randomness the shape of the cosmos and other puzzles of the universe while mapping convergences with the work of such artists as Paul Cezanne Mark Rothko Sol LeWitt and Lee Krasner Her account focusing on questions she has investigated in her own scientific work is illustrated by more than two hundred color images of artworks by modern and contemporary artists Thus Marcolli finds in still life paintings broad and deep philosophical reflections on space and time and connects notions of space in mathematics to works by Paul Klee Salvador Dal and others She considers the relation of entropy and art and how notions of entropy have been expressed by such artists as Hans Arp and Fernand L ger and traces the evolution of randomness as a mode of artistic expression She analyzes the relation between graphical illustration and scientific text and offers her own watercolor decorated mathematical notebooks Throughout she balances discussions of science with explorations of art using one to inform the other She employs some formal notation which can easily be skipped by general readers Marcolli is not simply explaining art to scientists and science to artists she charts unexpected interdependencies that illuminate the universe

**Wissenschaftlicher Briefwechsel mit Bohr, Einstein, Heisenberg u.a. / Scientific Correspondence with Bohr, Einstein, Heisenberg a.o.** Wolfgang Pauli,2007-08-08 Mit dem Druck von Wolfgang Paulis Briefwechsel aus seinen letzten beiden Lebensjahren wird eine gro angelegte Edition der gesamten wissenschaftlichen Korrespondenz eines der bedeutendsten theoretischen Physiker des 20 Jahrhunderts abgeschlossen der an der Entwicklung der wichtigsten physikalischen Ideen und Theorien insbesondere an der

Relativitätstheorie und Quantentheorie sowie deren weiteren Ausbau zu einer Feld- und Elementarteilchentheorie  
 teilgenommen hat. Der vorliegende, besonders umfangreiche Band mit 711 Briefen behandelt die durch Wu Telegdi Lederman  
 und andere bei den schwachen Wechselwirkungen beobachtete Paritätsverletzung, bei der das einst von Pauli postulierte Neutrino  
 eine herausragende Rolle spielt und die in der Theorie der Elementarteilchen einen allgemeinen Umschwung einleitete. Neue  
 Einblicke vermittelt der Briefwechsel in die enge Zusammenarbeit von Pauli und Heisenberg anlässlich einer damals  
 entwickelten einheitlichen Feldtheorie der Elementarteilchen. This volume of the letters Wolfgang Pauli wrote during the final  
 two years of his life completes the publication of the entire scientific correspondence of one of the most important theoretical  
 physicists of the 20th century. Pauli played a vital role in the development of the most important physical ideas and theories  
 of his time: relativity and quantum mechanics, in particular, and also in their extension to elementary particle field theory. This  
 especially extensive volume covers more than 700 letters between Pauli and scientists such as Wu Telegdi Lederman and  
 others, in which he discussed parity violation observed under the weak interaction, in which the neutrino first postulated by  
 Pauli plays a crucial role. The letters also provide new insights into the close cooperation between Pauli and Heisenberg on  
 their work on the unified field theory of elementary particles, which was being developed at that time. Physics, Uspekhi
