Ohio State Library,1911     Darwin and the Making of Sexual Selection Evelleen Richards,2017-04-27 Darwin s concept of natural selection has been exhaustively studied but his secondary evolutionary principle of sexual selection remains largely

unexplored and misunderstood Yet sexual selection was of great strategic importance to Darwin because it explained things that natural selection could not and offered a naturalistic as opposed to divine account of beauty and its perception Only now with Darwin and the Making of Sexual Selection do we have a comprehensive and meticulously researched account of Darwin's path to its formulation one that shows the man rather than the myth and examines both the social and intellectual roots of Darwin's theory Drawing on the minutiae of his unpublished notes annotations in his personal library and his extensive correspondence Evelleen Richards offers a richly detailed multilayered history Her fine grained analysis comprehends the extraordinarily wide range of Darwin's sources and disentangles the complexity of theory practice and analogy that went into the making of sexual selection Richards deftly explores the narrative strands of this history and vividly brings to life the chief characters involved A true milestone in the history of science Darwin and the Making of Sexual Selection illuminates the social and cultural contingencies of the shaping of an important if controversial biological concept that is back in play in current evolutionary theory

**Domains and Major Transitions of Social Evolution** Jacobus J. Boomsma,2023-05-24 Evolutionary change is usually incremental and continuous but some increases in organizational complexity have been radical and divisive Evolutionary biologists who refer to such events as major transitions have not always appreciated that these advances were novel forms of pairwise commitment that subjugated previously

independent agents Inclusive fitness theory convincingly explains cooperation and conflict in societies of animals and free living cells but to deserve its eminent status it should also capture how major transitions originated from prokaryote cells to eukaryote cells via differentiated multicellularity to colonies with specialized queen and worker castes As yet no attempt has been made to apply inclusive fitness principles to the origins of these events Domains and Major Transitions of Social Evolution develops the idea that major evolutionary transitions involved new levels of informational closure that moved beyond looser partnerships Early neo Darwinians understood this principle but later social gradient thinking obscured the discontinuity of life s fundamental organizational transitions The author argues that the major transitions required maximal kinship in simple ancestors not conflict reduction in already elaborate societies Reviewing more than a century of literature he makes testable predictions proposing that open societies and closed organisms require very different inclusive fitness explanations It appears that only human ancestors lived in societies that were already complex before our major cultural transition occurred We should therefore not impose the trajectory of our own social history on the rest of nature This thought provoking text is suitable for graduate level students taking courses in evolutionary biology behavioural ecology organismal developmental biology and evolutionary genetics as well as professional researchers in these fields It will also appeal to a broader interdisciplinary audience including the social sciences and humanities
