Selections Of Huxley 1911:

Monthly Bulletin of the Public Library of the District of Columbia District of Columbia. Public Library, 1913 **Who's who in America** ,1924 Monthly Bulletin of the Public Library of the District of Columbia ,1913 **Bulletin** ,1912 **The Kappa Alpha Journal** ,1919 Multilevel Selection and the Theory of Evolution Ciprian Jeler, 2018-06-07 This book puts multilevel selection theory into a much needed historical perspective This is achieved by discussing multilevel selection in the first half of the twentieth century the reasons for the energetic rejection of Wynne Edwards group selectionist stance in the 1960s Elisabeth Lloyd s contribution to the units of selection debate Price s hierarchical equation and its possible interpretations and finally species selection in macroevolutionary contexts Another idea also seems to emerge from these studies namely that perhaps a more sure footed position for multilevel selection theory would be acquired if we were to show a renewed interest in old group selection i e in scenarios in which the differential reproduction of the groups themselves affects the frequencies of either individual level or group level traits This book will be of interest to philosophers and historians of biology as well as to theoretically inclined biologists who have an interest in multilevel selection theory *Catalog of Copyright Entries* Library of Congress. Copyright Office, 1912 **Bulletin of the Ohio State Library** Ohio State Library, 1910 **Index-catalogue of the Library of the Surgeon-General's Office, United States Army** National Library of Medicine (U.S.), 1925 Bulletin ... Ohio State Library, 1911 **Imagine There's No Heaven** Mitchell Stephens, 2014-02-25 The historical achievements of religious belief have been large and well chronicled But what about the accomplishments of those who have challenged religion Traveling from classical Greece to twenty first century America *Imagine There's No Heaven* explores the role of disbelief in shaping Western civilization At each juncture common themes emerge by questioning the role of gods in the heavens or the role of a God in creating man on earth nonbelievers help move science forward By challenging the divine right of monarchs and the strictures of holy books nonbelievers including Jean Jacques Rousseau and Denis Diderot help expand human liberties and influence the early founding of the United States Revolutions in science in politics in philosophy in art and in psychology have been led on multiple occasions by those who are free of the constraints of religious life Mitchell Stephens tells the often courageous tales of history s most important atheists like Denis Diderot and Salman Rushdie Stephens makes a strong and original case for their importance not only to today s New Atheist movement but to the way many of us believers and nonbelievers now think and live *Darwin and the Making of Sexual Selection* Evelleen Richards, 2017-04-27 Darwin s concept of natural selection has been exhaustively studied but his secondary evolutionary principle of sexual selection remains largely unexplored and misunderstood Yet sexual selection was of great strategic importance to Darwin because it explained things that natural selection could not and offered a naturalistic as opposed to divine account of beauty and its perception Only now with *Darwin and the Making of Sexual Selection* do we have a comprehensive and meticulously researched account of Darwin s path to its formulation one that shows the man

rather than the myth and examines both the social and intellectual roots of Darwin's theory. Drawing on the minutiae of his unpublished notes, annotations in his personal library and his extensive correspondence, Evelleen Richards offers a richly detailed multilayered history. Her fine-grained analysis comprehends the extraordinarily wide range of Darwin's sources and disentangles the complexity of theory, practice and analogy that went into the making of sexual selection. Richards deftly explores the narrative strands of this history and vividly brings to life the chief characters involved. A true milestone in the history of science, *Darwin and the Making of Sexual Selection* illuminates the social and cultural contingencies of the shaping of an important if controversial biological concept that is back in play in current evolutionary theory. **Comparative**

Psychology Gary Greenberg, Maury M. Haraway, 1998-09-01. Are bird songs learned or genetically programmed? How do animals attract the opposite sex? How does play affect development? How do wolves signal surrender? Which animals have been observed using tools? Do squirrels ever forget food caches? How do bees differentiate between hives? Can some animals count? Examines the state of the art and its evolution. Exploring the full range of animal behavior studies, this authoritative Handbook covers the current state of the art as well as important historical developments in the field since its beginnings over a century ago. It features original essays by comparative psychologists and other animal behavior researchers in experimental psychology who examine and report on the latest research and discoveries in the areas of evolution, development and species-typical behavior. Discusses all other major approaches to animal behavior. The Handbook is the only major reference work to offer a unique psychological perspective of the field. It is also the only one to provide numerous examples of other major approaches to animal behavior and to discuss and compare them. Arranged in eight major sections for quick and efficient information retrieval, the Handbook covers the history and philosophical foundations of comparative psychology, spotlights key figures and provides international perspectives. Surveys all the important concepts, issues and theoretical developments in the field. Addresses the latest methodology focusing on apparatus, research design, statistical techniques and zoo research. Deals with physiological correlates of behavior: hormones, pheromones, sensation and perception and sleep. Provides intensive examinations of the behavior of a wide variety of species and groups of animals from cephalopods and insects to wolves and primates. Covers the key psychological processes of learning and development of behavior, a major emphasis of the field that distinguishes it from other approaches. Treats the full range of functional behaviors by which individuals and species ensure survival and reproductive success. Analyzes cognitive processes describing complex patterns of behavior in terms of information processing and use. Ideal as a source book for students in comparative psychology, ethology, sociobiology, anthropology and evolutionary psychology, the Handbook is also a handy reference for scientists working in these fields and for the lay person who wants to understand animal behavior. **Quarterly Bulletin** Berkshire Athenaeum and Museum, 1918. **Index-catalogue of the Library of the Surgeon General's Office, United States Army** Army Medical Library (U.S.), Library of the Surgeon-General's Office (U.S.), 1918. **Bulletin** Enoch Pratt Free Library of Baltimore

City, 1909 **The Genetical Theory of Natural Selection** Sir Ronald Aylmer Fisher, 1999-10-21 This is a definitive edition of R A Fisher's classic. It will include both Fisher's original 1930 text and that of a second edition of the book published in 1958. It also has a new foreword, some unpublished material, and private letters.

The genetical theory of natural selection R.A. Fisher, **Books of 1912-** Chicago Public Library, 1924 **Natural Selection** Richard G. Delisle, 2021-02-27 This book contests the general view that natural selection constitutes the explanatory core of evolutionary biology. It invites the reader to consider an alternative view which favors a more complete and multidimensional interpretation. It is common to present the 1930-1960 period as characterized by the rise of the Modern Synthesis, an event structured around two main explanatory commitments: 1. Gradual evolution is explained by small genetic changes, variations oriented by natural selection, a process leading to adaptation. 2. Evolutionary trends and speciation events are macroevolutionary phenomena that can be accounted for solely in terms of the extension of processes and mechanisms occurring at the previous microevolutionary level. On this view, natural selection holds a central explanatory role in evolutionary theory, one that presumably reaches back to Charles Darwin's *Origin of Species*, a view also accompanied by the belief that the field of evolutionary biology is organized around a profound divide: theories relying on strong selective factors and those appealing only to weak ones. If one reads the new analyses presented in this volume by biologists, historians, and philosophers, this divide seems to be collapsing at a rapid pace, opening an era dedicated to the search for a new paradigm for the development of evolutionary biology. Contrary to popular belief, scholars' position on natural selection is not in itself a significant discriminatory factor between most evolutionists. In fact, the intellectual space is quite limited, if not non-existent, between on the one hand Darwinists who play down the central role of natural selection in evolutionary explanations and on the other hand non-Darwinists who use it in a list of other evolutionary mechanisms. The mechanism-centered approach to evolutionary biology is too incomplete to fully make sense of its development. In this book, the labels created under the traditional historiography—Darwinian Revolution, Eclipse of Darwinism, Modern Synthesis, Post-Synthetic Developments—are thus re-evaluated. This book will not only appeal to researchers working in evolutionary biology but also to historians and philosophers.
