Visualizing the Semantic Web Vladimir Geroimenko, Chaomei Chen, 2006-07-01 The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from the existing data and metadata and so on Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework OWL Web Ontology Language and many other technologies help to erect a multistory building of the Semantic Web layer by layer by adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data

The Semantic Web Bo Leuf, 2006-02-22 The Semantic Web is an idea of World Wide Web inventor Tim Berners Lee that the Web as a whole can be made more intelligent and perhaps even intuitive about how to serve a user's needs Although search engines index much of the Web's content they have little ability to select the pages that a user really wants or needs Berners Lee foresees a number of ways in which developers and authors singly or in collaborations can use self descriptions and other techniques so that the context understanding programs can selectively find what users want The Semantic Web Crafting Infrastructure for Agency presents a more holistic view of the current state of

development and deployment This a comprehensive reference to the rapidly developing technologies which are enabling more intelligent and automated transactions over the internet and a visionary overview of the implications of deploying such a layer of infrastructure A through examination of the Semantic Web including the following topics web information management languages and protocols application and tools and collaboration and agency A unique volume of practical information in depth analysis conceptual overviews and contextual material from professionals in the field Features appendices of technical terms and glossary Semantic Web resources intellectual property issues and lists of elements This is essential reading for engineers web developers and industry professionals wishing to enhance their knowledge of recent developments Management staff lecturers postgraduate and undergraduate students will also find this book appealing

Semantic Web for the Working Ontologist Dean Allemang, James Hendler, 2011-07-05 Semantic Web for the Working Ontologist Effective Modeling in RDFS and OWL Second Edition discusses the capabilities of Semantic Web modeling languages such as RDFS Resource Description Framework Schema and OWL Web Ontology Language Organized into 16 chapters the book provides examples to illustrate the use of Semantic Web technologies in solving common modeling problems It uses the life and works of William Shakespeare to demonstrate some of the most basic capabilities of the Semantic Web The book first provides an overview of the Semantic Web and aspects of the Web It then discusses semantic modeling and how it can support the development from chaotic information gathering to one characterized by information sharing cooperation and collaboration It also explains the use of RDF to implement the Semantic Web by allowing information to be distributed over the Web along with the use of SPARQL to access RDF data Moreover the reader is introduced to components that make up a Semantic Web deployment and how they fit together the concept of inferencing in

the Semantic Web and how RDFS differs from other schema languages Finally the book considers the use of SKOS Simple Knowledge Organization System to manage vocabularies by taking advantage of the inferencing structure of RDFS Plus This book is intended for the working ontologist who is trying to create a domain model on the Semantic Web Updated with the latest developments and advances in Semantic Web technologies for organizing querying and processing information including SPARQL RDF and RDFS OWL 2 0 and SKOS Detailed information on the ontologies used in today s key web applications including ecommerce social networking data mining using government data and more Even more illustrative examples and case studies that demonstrate what semantic technologies are and how they work together to solve real world problems

Geoinformatics A. Krishna Sinha,2006-01-01 The science of informatics in the broadest sense has been several thousands of years in the making With the recent emergence of large storage devices and high speed processing of data it has become possible to organize vast amounts of data as digital products with ontologic tags and concepts for smart queries Coupling this computational capability with earth science data defines the emerging field of geoinformatics Since the science of geology was established several centuries ago observations led to conclusions that were integrative in concept and clearly had profound implications for the birth of geology As disciplinary information about Earth becomes more voluminous the use of geoinformatics will lead to integrative science based discoveries of new knowledge about planetary systems Twenty one research papers co authored by 96 researchers from both earth and computer sciences provide the first ever organized presentation of the science of informatics as it relates to geology Readers will readily recognize the vast intellectual content represented by these papers as they seek to address the core research goals of geoinformatics Publisher s website
