Semantics From Different Points Of View:

Semantics from Different Points of View R. Bäuerle, U. Egli, A. v. Stechow, 2013-04-09 **Semantics - Typology, Diachrony and Processing** Klaus Heusinger, Claudia Maienborn, Paul Portner, 2019-02-19 Now available in paperback for the first time since its original publication the material in this book provides a broad accessible guide to semantic typology crosslinguistic semantics and diachronic semantics Coming from a world leading team of authors the book also deals with the concept of meaning in psycholinguistics and neurolinguistics and the understanding of semantics in computer science It is packed with highly cited expert guidance on the key topics in the field making it a bookshelf essential for linguists cognitive scientists philosophers and computer scientists working on natural language **Semantics: Noun phrase classes** Javier Gutiérrez-Rexach, 2003 Modality, Subjectivity, and Semantic Change Heiko Narrog, 2012-07-19 This book is a cross linguistic exploration of semantic and functional change in modal markers Its approach is broadly functional typological but makes frequent reference to work in formal semantics by scholars such as Angelika Kratzer and Paul Portner The author starts by considering what modality is and how it relates to and differs from subjectivity He argues that modality cannot be defined in terms of subjectivity both concepts are independent of each other the first exhibiting different degrees of subjectivity and the second being operative in a much wider range of grammatical and lexical categories Subjectivity he suggests should not be defined solely in terms of performativity evidentiality or construal but rather from the interplay of multiple semantic and pragmatic factors He then presents a two dimensional model for the descriptive representation of modality based on the notion that among the many aspects of modal meaning volitivity and speech act orientation versus event orientation are two of its most salient parameters He shows that it is especially the dimension of speech act orientation versus event orientation parallel to category climbing in syntax that is operative in diachronic change Numerous examples of diachronic change within modality and between modality and other categories are then examined with respect to their directionality With a focus on Japanese and to a lesser extent Chinese the book is a countercheck to hypotheses built on the Indo European languages It also contains numerous illustrations from other languages **Logic and Engineering of Natural Language Semantics** Daisuke Bekki, Koji Mineshima, Elin McCready, 2023-10-23 This volume LNCS 14213 constitutes the refereed proceedings of the 19th International Conference LENLS 2019 held in November 2022 in Tokyo Japan The 13 full papers presented were carefully reviewed and selected from 34 submissions The conference focuses on theoretical and computational linguistics covering topics ranging from syntax semantics and pragmatics to the philosophy of language and natural language processing *Web Semantics & Ontology* Taniar, David, Rahayu, Johanna Wenny, 2006-02-28 This book provides an overview of current research and development activities in the area of web semantics and ontology giving an in depth description of different issues including modeling using ontologies in enterprise systems querying and knowledge discovering of ontologies Provided by publisher **The Semantics of Polysemy** Nick Riemer, 2008-08-22 This

book addressed primarily to students and researchers in semantics cognitive linguistics English and Australian languages is a comparative study of the polysemy patterns displayed by percussion impact hitting verbs in English and Warlpiri Pama Nyungan Central Australia The opening chapters develop a novel theoretical orientation for the study of polysemy via a close examination of two theoretical traditions under the broader cognitivist umbrella Langackerian and Lakovian Cognitive Semantics and Wierzbickian Natural Semantic Metalanguage Arguments are offered which problematize attempts in these traditions to ground the analysis of meaning either in cognitive or neurological reality or in the existence of universal synonymy relations within the lexicon Instead an interpretative rather than a scientific construal of linguistic theorizing is sketched in the context of a close examination of certain key issues in the contemporary study of polysemy such as sense individuation the role of reference in linguistic categorization and the demarcation between metaphor and metonymy The later chapters present a detailed typology of the polysemous senses of English and Warlpiri percussion impact or P I verbs based on a diachronically deep corpus of dictionary citations from Middle to contemporary English and on a large corpus of Warlpiri citations Limited to the operations of metaphor and of three categories of metonymy this typology posits just four types of basic relation between extended and core meanings As a result the phenomenon of polysemy and semantic extension emerges as amenable to strikingly concise description Semantik / Semantics Arnim von Stechow, Dieter

Wunderlich, 2008-07-14 During the past 20 years the investigation into meaning of natural languages has emerged into one of the most active disciplines in theoretical linguistics The different traditions of linguistics philosophy of language and philosophical logic converged in the paradigm of truth conditional semantics which now plays a central role in the cognitive sciences From empirical research in particular languages more principal questions arise of how the speaker succeeds in expressing particular types of meaning by use of formal combination of signs The theories developed to cope with the question assume that for a hearer the meaning of a complex expression must be computable and therefore modern theoretical semantics uses formal algebraic methods to construct the meaning compositionally in view of syntactic structure Furthermore meaning need to be anchored in the experience available to hearer In order to deal with this theoretical semantics extensively uses the concept of truth conditions which roughly explain how a world must be structured in order to be matched by certain linguistic expressions Semantic analyses are complemented by context theory and the theory of speech acts Thus linguistic meaning must be related to human cognitive capacities and therefore theoretical semantics is tightly connected with philosophical logic as well as cognitive sciences in general The aim of this handbook is to represent the body of theoretical knowledge which has evolved in the international research of the last two decades Some of the theories can now be termed classical in that they belong to the commonly accepted base of theoretical semantics Other theories are still disputed and there are problems still to be solved as normal in a more developed science The authors who are leading experts in the field of semantics try to balance the accepted and the questionable results It goes without saying

that each author hold a particular position in this respect Some articles are written in English some in German Since semantics is considered to be a subfield of linguistics the articles are arranged due to linguistic points of view In the first 5 chapters comprising 15 articles the common principles of semantics are presented ontological foundations of semantics composition of meaning problems of use context speech acts and lexical base of meaning The next 5 chapters comprising 25 articles are concerned with semantic phenomena theories and problems which are specific for a particular class of linguistic expressions These are arranged according to parts of speech nouns functional categories verbs adjectives and so on This division does not reflect a theoretical position by itself however it allows one to recognize problems connected with one another Some more general questions are discussed in more than one article in different perspective and vicinity The Handbook is complemented by a service article on formal methods in semantics followed by a comprehensive bibliography including about 1700 entries and both a subject and a name index This handbook is indispensable for all research in linguistics and neighboring disciplines philosophy of language cognitive sciences Some of the articles can serve as basic literature for classes of advanced students *The Semantics-Pragmatics Controversy* Kristin Börjesson, 2014-01-31

Currently there is a great number of approaches to the semantics pragmatics distinction on the market This book is unique in that it offers a comprehensive overview comparison and critical evaluation of these approaches Taking as a starting point the notorious difficulty of differentiating so called literal from non literal or figurative meaning it covers a wide range of the key current topics in semantics and pragmatics e g the saying meaning distinction minimalism vs contextualism unarticulated constituents indexicalism generalised conversational implicatures speech acts levels of meaning in interpretation the role of context in interpretation the nature of lexical meaning Notably rather than taking a solely theoretical perspective the book integrates psycho and neurolinguistic perspectives considering experimental results concerning the differences in processing of the various types of meaning covered In terms of topics covered and perspectives taken it is equally well suited for undergraduate as well as postgraduate students of linguistics and or philosophy of language *Semantics. Volume 3*

Claudia Maienborn, Klaus von Heusinger, Paul Portner, 2012-12-19 No detailed description available for SEMANTICS MAIENBORN ET AL BD 33 3 HSK E BOOK **Default Semantics** Katarzyna Jaszczołt, 2005 In this pioneering book Kasia Jaszczołt lays down the foundations of an original theory of meaning in discourse reveals the cognitive foundations of discourse interpretation and puts forward a new basis for the analysis of discourse processing She provides a step by step introduction to the theory and its application and explains new terms and formalisms as required Dr Jaszczołt unites the precision of truth conditional dynamic approaches with insights from neo Gricean pragmatics into the role of speaker's intentions in communication She shows that the compositionality of meaning may be understood as merger representations combining information from various sources including word meaning and sentence structure various kinds of default interpretations and conscious pragmatic inference Among the applications the author discusses are constructions that pose

problems in semantic analysis such as referring expressions propositional attitude constructions presupposition modality numerals and sentential connectives She proposes solutions to cutting edge problems in the semantics pragmatics interface for example how many levels of meaning should be distinguished the status of underspecification how much contextual information should be placed in the representation of the speaker's meaning whether there are default interpretations the stage of utterance interpretation at which pragmatic inference begins and whether compositionality is a necessary feature of the theory of meaning and if so how it is to be defined The book is for students and researchers in semantics pragmatics computational linguistics and philosophy of language at advanced undergraduate level and above

Semantic Web Services Challenge Charles J. Petrie, Tiziana Margaria, Holger Lausen, Michal Zaremba, 2008-11-27 Service Oriented Computing is one of the most promising software engineering trends for future distributed systems Currently there are many different approaches to semantic web service descriptions and many frameworks built around them Yet a common understanding evaluation scheme and test bed to compare and classify these frameworks in terms of their abilities and shortcomings is still missing Semantic Web Services Challenge is an edited volume that develops this common understanding of the various technologies intended to facilitate the automation of mediation choreography and discovery for Web Services using semantic annotations Semantic Web Services Challenge is designed for a professional audience composed of practitioners and researchers in industry Professionals can use this book to evaluate SWS technology for their potential practical use The book is also suitable for advanced level students in computer science

Experimental Perspectives on Presuppositions Florian Schwarz, 2014-09-12 This volume brings together some of the most recent developments in the field of experimental pragmatics specifically empirical approaches to theoretical issues in presupposition theory It includes studies of the online processing of presupposed content investigations of the interpretive properties of presuppositions in various linguistic contexts comparative perspectives relative to other aspects of meaning such as asserted content and implicatures cross linguistic comparisons of presupposition triggers and perspectives from language acquisition Taken together these novel contributions provide a snapshot of state of the art developments in this area and will serve as a point of reference for numerous emerging avenues of future work It makes for an ideal set of readings for advanced university courses on experimental studies of meaning and is a must read for anyone interested in experimental research on meaning in natural language

Semantic Integration of Heterogeneous

Software Specifications Martin Große-Rhode, 2013-03-09 In a model based development of software systems different views on a system are elaborated using appropriate modeling languages and techniques Because of the unavoidable heterogeneity of the viewpoint models a semantic integration is required to establish the correspondences of the models and allow checking of their relative consistency The integration approach introduced in this book is based on a common semantic domain of abstract systems their composition and development Its applicability is shown through semantic interpretations and compositional comparisons of different specification approaches These range from formal specification techniques like process calculi Petri nets and rule based formalisms to semiformal software modeling languages like those in the UML family

service academic and industry Utterance Interpretation and Cognitive Models Philippe De Brabanter, Mikhail Kissine, 2009-06-09 This book Utterance Interpretation and Cognitive Models is a collection of papers that stems from the conference of the same name held at the Free University of Brussels in June 2006 Our main objective is to reconcile armchair theorising about the semantics pragmatics interface with hypotheses about cognitive architecture For that reason the papers in the collection place some of the hottest questions in contemporary philosophy of language within the scope of a psychologically plausible theory of human communication The collection is articulated into three parts The first concerns the cognitive counterparts of lexical meanings The second explores the links between moods and forces The third looks at the epistemological status of semantic theory from the point of view of human psychology
